EXECUTIVE SUMMARY

GZA GeoEnvironmental, Inc. (GZA) conducted a Phase I Environmental Site Assessment (ESA) for the property located at 1910 East North Avenue in Milwaukee, Wisconsin (“Site”). The Site visit portion of our Phase I ESA was conducted on June 17, 2011.

The Site consists of a 1.02-acre parcel improved with an approximately 15,000 square-foot, one-story library building with a partial basement located on the southern portion of the Site, and an approximately 12,000 square-foot, asphalt-paved parking lot on the northern portion of the Site. The Site is currently utilized as East Library, a neighborhood library within the Milwaukee Public Library system.

The Site was historically comprised of several separate properties which were occupied with residential and commercial buildings since the Site was developed prior to 1894 until the buildings were demolished in the mid- to late 1960s, in preparation for the construction of the existing Site building. Former commercial occupants of the Site included stores, restaurants, taverns, a bakery, a carpet service company, offices, a sheet metal and furnace works, an appliance repair company and an excavating and grading business. The existing Site building and paved parking lot were constructed at the Site in 1967 and/or 1968, and have been utilized as a neighborhood library and associated parking lot since that time.

Since the 1800s, properties abutting the Site have primarily been occupied by residential and commercial buildings. Of the current and former Site vicinity occupants, the former occupant of 2315 North Murray Avenue (Canton Laundry and Dry Cleaning, listed in the city directory dated 1960) had the potential to result in subsurface impacts at the Site due to its location (directly abutting the Site to the east) and the operations performed (dry cleaning).

GZA reviewed an Asbestos Inspection Report for the Site building, dated July 17, 1990. The report categorized several building materials within the Site building as “Proven” or “Assumed” to contain asbestos-containing building materials (ACBMs). GZA did not observe friable ACBMs during the Site visit.

GZA also reviewed a report entitled “Historical Land Use Investigations of Two City of Milwaukee Parking Lots at 1910 East North Avenue and 2353 North Farwell Avenue, prepared by the City of Milwaukee (“City”) Health Department and City Department of City Development (DCD), dated August 4, 2000. The report concluded, “We do not recommend a Phase II site assessment at this time. However, before any land disturbance

is commence, e.g. site excavation, soil boring, etc., we recommend a systematic search for USTs and utility fixtures within both project Sites A & B.”

GZA did not observe aboveground storage tanks (ASTs) or generation or storage of hazardous wastes during the Site reconnaissance.

Evidence of underground storage tanks (USTs) was not observed at the Site. However, City building records do not indicate what type of heat the former structures at the Site utilized and there is the potential that heating oil was used to heat the former residences at the Site and that ASTs or USTs were associated with former heating oil systems. However, it is possible that tanks were removed and discarded during the demolition of buildings that were historically present at the Site.

GZA observed small containers (five gallons or less) of household and boiler cleaning chemicals inside the Site building and two one-gallon containers of gasoline in a flammables cabinet outside the Site building. Leaking or staining were not observed in association with the chemicals or gasoline.

The Site is not listed on the federal databases searched by Environmental Data Resources, Inc. (EDR). The Site is not listed on the Wisconsin Department of Natural Resources (WDNR) Bureau of Remediation and Redevelopment Tracking System (BRRTS), WDNR Solid and Hazardous Waste Information System (SHWIMS), or Wisconsin Department of Commerce (Commerce) Tank Inventory databases reviewed by GZA.

The historical Site address, 1908 East North Avenue, was identified on the EDR Historical Cleaners database as “Carpet Service Co. Cleaners” in 1947. Based on available information, the company likely performed off-Site carpet installation and cleaning (rather than on-Site dry cleaning) and it is GZA’s opinion that the former presence of this occupant did not likely result in subsurface impacts to the Site. The Site was not identified on additional state databases searched by EDR.

GZA did not identify recognized environmental conditions (RECs) in connection with the Site, with the exception of the following:

1. Historical dry cleaning operations at the off-Site property directly abutting the Site to the east, 2315 North Murray Avenue (Canton Laundry and Dry Cleaning, listed in the city directory dated 1960), had the potential to impact soil and/or groundwater at the Site.

Additionally, GZA notes the following environmental concerns:

1. The parcels that make up the Site may have had oil-burning furnaces and associated fuel oil storage tanks. The storage tanks may have been ASTs or USTs that may have been removed during demolition activities; however, no documentation regarding proper abandonment is available. Therefore, there is the potential that fuel oil USTs may be encountered during redevelopment activities. Please note, however, that there was no direct evidence in the information reviewed by GZA as part of this Phase I ESA of USTs being currently or historically present on the parcels that make up the Site. If encountered, the fuel oil tanks should be properly closed and disposed.
2. Based on historical sampling, ACBMs are present within the Site building. However, GZA did not observe friable ACBMs. GZA recommends that ACBMs and presumed ACBMs be properly managed during future building renovation activities and that ACBMs be abated if rendered friable.

1.0 INTRODUCTION

1.1 PROJECT AUTHORIZATION

This report presents to the City of Milwaukee (“City”), Department of City Development (DCD) (“Client”) the results of a Phase I Environmental Site Assessment (ESA) conducted by GZA GeoEnvironmental, Inc. (GZA) for the East Library property located at 1910 East North Avenue in Milwaukee, Wisconsin (“Site”). The Site visit portion of our Phase I ESA was conducted on June 17, 2011. Our services were provided in accordance with our Proposal No. 20.P000200.12, dated June 8, 2011.

1.2 PROJECT OBJECTIVE

The purpose of the Phase I ESA was to render an opinion whether or not surficial or historical evidence indicates the presence of recognized environmental conditions¹ (RECs), as defined in the American Society for Testing and Materials (ASTM) Standard Practice E1527-05 that embodies the All Appropriate Inquiry (AAI) Final Rule (40 CFR Part 312) for Phase I ESAs. The Phase I ESA was performed in accordance with the ASTM E1527-05 Standard as part of the environmental due diligence associated with a contemplated transaction.

1.3 SCOPE OF SERVICES

GZA’s Phase I scope of services consisted of the following activities:

- A Site reconnaissance to make surficial observations for evidence of RECs;
- A review of state and federal databases;
- Contacting local regulatory agencies to inquire about the Site;
- A vicinity reconnaissance of properties within ¼-mile of the Site;

¹ ASTM E-1527-05 defines the term “recognized environmental conditions” to mean the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies.

- Observation of adjoining properties from the Site to identify the potential use of hazardous substances, petroleum or petroleum products, pollutants, contaminants and controlled substances;
- Interviews with a key Site manager regarding current Site use and operations; and
- Preparation of this report of our findings.

This report presents GZA's field observations, results and opinions. This report is subject to modification if subsequent information is developed by GZA or by any other party. This report is subject to the Limitations presented in Section 10.0 and Appendix A.

1.4 EXCEPTIONS TO ASTM STANDARD

There were no noteworthy exceptions to or deletions from the ASTM practice associated with the completion of this Phase I ESA.

2.0 BACKGROUND SITE INFORMATION

The following information was obtained during GZA's reconnaissance and from interviews with people knowledgeable about the Site. Additional information on Site use, area observations and activity at the Site is contained in Section 6.0. Photographs of the Site and vicinity are provided in Appendix B.

2.1 SITE LOCATION

The Site is located in the northeastern portion of the City of Milwaukee, within the southwest ¼ of the southwest ¼ of Section 22, Township 7 North, Range 22 East, Milwaukee County, Wisconsin. A Site Location Map is provided as Figure 1.

2.2 SITE DESCRIPTION

The Site consists of an approximately 1.02-acre parcel improved with an approximately 15,000 square-foot, one-story library building with a partial basement located on the southern portion of the Site, and an approximately 12,000 square-foot, asphalt-paved parking lot on the northern portion of the Site. The first floor of the library building interior includes the main library area, a meeting room, a small kitchen and employee break area, and restrooms, while the partial basement is utilized as a utility room. The east and west sides of the Site building exterior are surrounded by a narrow concrete pad while

small, concrete-paved patio areas directly abut the Site building to the north and south. The asphalt-paved parking lot on the northern portion of the Site is accessed via a paved entrance from North Cramer Street and the parking lot and entrance are surrounded by grass-covered and landscaped areas. A Site Plan is provided as Figure 2.

2.3 CURRENT SITE USE

The Site is currently utilized as East Library, a neighborhood library within the Milwaukee Public Library system.

2.4 ADJOINING PROPERTIES USE

North Cramer Street abuts the Site to the west, beyond which are Vitucci's Cocktail Lounge and several residential properties. East Thomas Street abuts the Site to the north, beyond which is Salem Evangelical Lutheran Church. Westbury Bank and several commercial properties including restaurants, bars and law offices abut the Site to the east. East North Avenue abuts the Site to the south, beyond which are commercial properties including night clubs and Beans and Barley (deli, market and café).

2.5 AREA USE

The general area in the vicinity of the Site beyond the areas described above is primarily commercial and residential.

2.6 SITE UTILITIES

The Site area is serviced with natural gas and electrical utilities provided by We Energies. Potable water and sewer are provided to the Site area by the City.

3.0 ENVIRONMENTAL SETTING

The following sections provide information regarding the general physiographic, hydrologic and soil conditions in the area of the Site.

3.1 TOPOGRAPHY AND SURFACE WATER CHARACTERISTICS

Based on a review of the Milwaukee Quadrangle, Wisconsin United States Geological Survey (USGS) Topographic Map, the Site elevation ranges from approximately 641 to 648 feet above mean sea level (msl) and the ground surface generally slopes downward toward the southeast. Surface water features in the Site vicinity include the Milwaukee

River located approximately 1,700 feet west of the Site and Lake Michigan located approximately 3,200 feet east of the Site. Local area topography is presented on Figure 1.

3.2 GEOLOGY AND GROUNDWATER CHARACTERISTICS

Based on information provided in the Soil Survey of Milwaukee and Waukesha Counties, Wisconsin, the specific soil type in the vicinity of the Site has not been mapped due to its urban location. However, the general soil association mapped in the Site vicinity is identified as the Kewaunee-Manawa Association. Soil in this association generally has a subsoil of clay and silty clay and was formed in thin loess and silty clay glacial till on moraines and in depressed areas.

The soil section at the Site is underlain by approximately 100 to 150 feet of unconsolidated till deposits consisting primarily of silty clay with occasional lenses of sandy lake deposits and gravelly outwash interspersed. The unconsolidated sediments are underlain by dolomite bedrock.

Based on a review of a regional groundwater table elevation map for southeastern Wisconsin, the regional water table in the Site vicinity is deeper than 50 feet below ground surface (bgs) and regional groundwater flow is east toward Lake Michigan. However, based on a review of groundwater data for shallow monitoring wells installed approximately 500 feet east of the Site, a perched/shallow groundwater table is also present within approximately 10 feet of the ground surface in the Site vicinity. Shallow groundwater flow beneath the Site is likely southeast based on Site topography; however, the groundwater flow direction may also be influenced by the presence of underground utilities.

4.0 HISTORICAL USE INFORMATION

Site history was developed from ASTM standard historical sources, available files and an interview with Ms. Taj Schoening, Manager of the East Library, and Mr. Mark Mathews, Maintenance Manager for the Site.

4.1 SITE AND AREA HISTORY SUMMARY

The Site was historically comprised of several separate properties which were occupied with residential and commercial buildings since the Site was developed prior to 1894 until the buildings were demolished in the mid- to late 1960s, in preparation for the construction of the existing Site building. Based on a review of city directories and Sanborn Fire

Insurance Maps, former commercial occupants of the Site included stores, restaurants, taverns, a bakery, a carpet service company, offices (insurance company and savings and loan), a sheet metal and furnace works, an appliance repair company and an excavating and grading business. The existing Site building and paved parking lot were constructed at the Site in 1967 and/or 1968, and have been utilized as a neighborhood library and associated parking lot since that time.

Since the 1800s, properties abutting the Site along North Cramer Street and East Thomas Avenue have historically primarily been occupied by residential buildings; those along North Murray Avenue have primarily been a mixture of residential and commercial buildings; and primarily commercial buildings have abutted the Site along East North Avenue, including Canton Laundry and Dry Cleaning, listed in the 1960 city directory at 2315 North Murray Avenue.

4.2 CITY DIRECTORIES REVIEW

GZA visited the City Public Library to review historical city directories for the Site and surrounding properties at approximately five-year intervals for the years spanning 1935 through 2009. Please note that street addresses in the Site vicinity were changed in the early 1930s; therefore, volumes published prior to 1935 were not reviewed for the Site. Please also note that the occupancy of the properties that comprised the Site was also occasionally listed in the city directories as “Vacant,” “No Current Listing,” or “Not Verified.”

As presented in the following table, the Site area was historically comprised of several individual residential and commercial properties with even-numbered addresses that ranged from 1900 to 1916 East North Avenue, even-numbered addresses that ranged from 2300 to 2344 North Cramer Street and odd-numbered addresses that ranged from 1901 to 1913 East Thomas Avenue. The individual properties were combined into one parcel identified by the 1910 East North Avenue street address in the late 1960s, around the time the existing library building was constructed.

4.3 HISTORIC SANBORN MAP REVIEW

A request was made to Environmental Data Resources, Inc. (EDR) to search for copies of historic maps, such as Sanborn Fire Insurance Maps. EDR provided Sanborn Maps from 1894, 1910, 1951 and 1968, that include the Site and surrounding vicinity. Copies of the Sanborn Maps are provided in Appendix C. Site boundaries and details are not completely discernible; however, the Sanborn maps indicated the following features:

- 1894 - The Site was developed with five “Stores” (that occupied three buildings), seven residential buildings and one outbuilding associated with one of the residences. Properties surrounding the Site were primarily occupied by residential buildings along North Cramer Street and East Thomas Avenue, a mixture of residential and commercial buildings (“Stores”) along North Murray Avenue and primarily commercial buildings (“Stores”) along East North Avenue.
- 1910 - The Site was developed with six “Stores” (that occupied four buildings), eight residential buildings and one outbuilding associated with one of the Stores. Significant changes to the Site vicinity were not noted.
- 1951 - The Site was developed with three buildings occupied by restaurants, one building occupied by a “Store,” eight residential buildings, four detached garages associated with the residences and one parking lot. Properties abutting the Site were primarily residential or “Stores.” Notable properties in the Site vicinity included a “Paints” store located less than 100 feet east of the Site; an “Undertaker”

located approximately 125 feet west of the Site; two automobile repair shops located approximately 175 feet and 225 feet south of the Site, respectively; and a filling station and automobile sales and service business located approximately 325 feet southwest of the Site.

- 1968 - The Site buildings observed on the 1951 Sanborn Map were no longer present; most of the south half of the Site was occupied by a building labeled “East Public Library” and the north half of the Site was labeled “Parking.” Properties abutting the Site were primarily residential or “Stores.” Notable properties in the Site vicinity include a “Research Laboratory” approximately 250 feet west of the Site and an automobile sales and service business located approximately 325 feet southwest of the Site.

4.4 AERIAL PHOTOGRAPH REVIEW

GZA reviewed aerial photographs dated 1937, 1950, 1956, 1963, 1969, 1979, 1981, 1985, 1992 and 2005, provided by EDR for the Site and surrounding properties. Due to the quality and scale of the photographs, Site boundaries and details are not completely discernible; however, the aerial photographs indicated the following features:

- 1937, 1950, 1956 and 1963 - The southern portion of the Site (located along East North Avenue) appears to be developed with commercial buildings while the remainder of the Site appears to be developed with several residential buildings (along North Cramer Street and East Thomas Avenue). Properties surrounding the Site also appear to be primarily developed with residential or commercial structures.
- 1969, 1979, 1981, 1985, 1992 and 2005 - The southern approximate half of the Site appears to be developed with the existing Site building and the northern approximate half of the Site is developed with a paved parking lot. Properties surrounding the Site appear to be primarily developed with residential and commercial structures.

4.5 PROPERTY ASSESSMENT AND BUILDING INSPECTOR RECORDS

GZA visited the City’s Development Center office and requested access to documents for historical Site addresses (including even-numbered addresses that ranged from 1900 to 1916 East North Avenue, even-numbered addresses from 2300 to 2344 North Cramer Street and odd-numbered addresses from 1901 to 1913 East Thomas Avenue). City

Development Center staff informed GZA that of the addresses requested, only records for 1910-12 East North Avenue and 2316-18 North Cramer Street were identified in their files. Pertinent findings within the files include the following:

- 2316-18 North Cramer Street:
 - An “Application for Permit to Make Alterations,” dated April 9, 1897, for a one-story store to be moved from another property to the Site and remodeled into a cottage.
- 1910-12 East North Avenue:
 - An “Application for Permit,” dated October 28, 1904, to make alterations to an existing building located at 402 North Avenue (based on a review of the 1910 Sanborn Map this former address was located on the southeast corner of the Site).
 - An “Application for Permit,” dated December 26, 1929, to make alterations to an existing store located at 402 North Avenue.
 - An “Application for Permit to Occupy,” dated December 4, 1939, for an Insurance and Real Estate Office to occupy a building located at 1910 East North Avenue.
 - An “Application for Permit,” dated June 16, 1967, to raze a two-story, brick building and a 1½-story concrete block building.
 - An “Application for Permit,” dated December 14, 1967, to construct a new, one-story, “neighborhood library” building at the Site.
 - An “Application for Permit,” dated May 29, 1968, to install one gas burner, one heating system and one incinerator at the Site. The building type was listed as “new construction.”
 - An “Application for Occupancy Certificate,” dated October 4, 1968, for the “entire building and parking area” to be occupied as a “neighborhood library.” The “former occupancy” is listed as “new construction.”

4.6 TITLE SEARCH AND HISTORY OF OWNERSHIP

GZA was not requested to obtain an abstract of title or environmental liens report for review.

GZA notes that the EDR Report discussed in Section 7.0 conducted a search of federal and state environmental databases, including databases of properties having records of engineering or institutional controls. The Site was not listed on the database as having any deed or activity use limitations (AULs) such as institutional and engineering controls.

4.7 KEY SITE MANAGER AND OTHER INFORMATION

Ms. Schoening and Mr. Mathews provided the following additional information to GZA:

- The Site building was constructed in approximately 1968 and/or 1969, and has been utilized as a library since that time.
- They were not aware of any underground storage tanks (USTs) or aboveground storage tanks (ASTs) currently present at the Site.
- They were not aware of a septic system or any wells at the Site.
- They were not aware of environmental issues or previous environmental investigations associated with the Site.

5.0 PREVIOUS SITE INVESTIGATIONS

GZA reviewed an Asbestos Inspection Report for the Site building, dated July 17, 1990. The report included an inventory of building materials within the various areas inside the Site building, and identified whether the building materials contained asbestos-containing building materials (ACBMs). Building materials were categorized as either “Non-Suspect,” “Non-ACBM,” “Assumed,” or “Proven.” Building materials inside the Site building classified in the report as either “Proven” or “Assumed” to contain ACBM included the following:

- “Floor tile, 12 inch x 12 inch, cream textured” (identified throughout the main library area and in the employee break room, kitchen, restocking room and storage closets), classified as “Proven” to contain ACBM.

- “Duct Insulation Mastic,” identified above the ceiling in the circulation desk area, classified as “Proven” to contain ACBM.
- “Pipe Fitting Insulation (Thermal Cement), on fiberglass insulated lines larger than six inches,” identified “above ceiling, in plenum” in the circulation desk area, classified as “Proven” to contain ACBM.
- “Duct Connectors (Flexible Vibration Isolators), woven,” identified in the utility room, classified as “Proven” to contain ACBM.
- “Pipe Fitting Insulation (Thermal Cement), on fiberglass insulated lines, six inches or smaller,” identified in the utility room and in a crawl space that is accessed through a panel in the utility room, classified as “Proven” to contain ACBM.
- “Fire Doors, wood,” identified in the utility room, classified as “Assumed” to contain ACBM.
- “Breeching Insulation (Van Packer), on furnace and incinerator,” identified in the utility room, classified as “Assumed” to contain ACBM.

GZA also reviewed a report entitled “Historical Land Use Investigations of Two City of Milwaukee Parking Lots at 1910 East North Avenue and 2353 North Farwell Avenue,” prepared by the City Health Department and City DCD, dated August 4, 2000. Conclusions presented in the report included the following:

- “Although Project Site A (the parking lot on the northern portion of the Site) was used by an appliance and refrigeration service facility and by a grading and excavation construction company, we do not believe that these uses have adversely affected this parcel. In addition, records indicate that it was apparently used last as a residential parcel, before it became a parking lot.”
- “Selected historical land uses of properties adjacent to Project Site A that raise potential environmental concerns include: sheet metal, carpet layers, furnace works, and a roofing company. However, we do not feel that these land uses have adversely impacted the Site.”
- “We do not recommend a Phase II site assessment at this time. However, before any land disturbance is commence, e.g. site excavation, soil boring, etc., we

recommend a systematic search for USTs and utility fixtures within both project Sites A & B. If found, the contents of the USTs should be sampled and tested for potential reuse, recycling, or disposal, according to State regulations. If found, all abandoned tanks should be properly removed, and a site assessment conducted, according to existing WDNR regulations. The tanks should also be registered with the Wisconsin Department of Commerce.”

6.0 SITE RECONNAISSANCE

The purpose of GZA’s Site reconnaissance was to make surficial observations for evidence of RECs that could result in the presence of hazardous substances, petroleum or petroleum products, pollutants, contaminants, or controlled substances in the environment. GZA Senior Project Manager, Dr. Jay Karls, and GZA Hydrogeologist, Ms. Susan Karls, visited the Site on June 17, 2011, during daylight hours. Observations were documented and are referenced in the text. A summary of each area assessed is presented below.

6.1 EXTERIOR OBSERVATIONS

The periphery of the Site and those portions of the properties not occupied by structures were visually assessed for environmental conditions.

6.1.1 Underground Storage Tanks

Evidence of USTs was not observed at the Site. However, City building records do not indicate what type of heat the former structures at the Site utilized and there is the potential that heating oil was used to heat the former residences at the Site and that ASTs or USTs were associated with former heating oil systems. However, it is possible that tanks were removed and discarded during the demolition of buildings historically present at the Site.

6.1.2 Aboveground Storage Tanks

ASTs were not observed.

6.1.3 Exterior Hazardous Substances, Petroleum or Petroleum Products, Pollutants, Contaminants, or Controlled Substances Use

Two small (approximately one-gallon capacity), metal containers of gasoline were observed in a metal flammables storage cabinet staged on a concrete pad adjacent to the eastern exterior wall of the Site building. The gasoline is reportedly used to

fuel a lawn mower used at the Site. Other hazardous substances, petroleum or petroleum products, pollutants, contaminants, or controlled substances use or storage were not observed on the exterior of the Site.

6.1.4 Staining

Staining, other than de minimis staining associated with vehicles in paved parking and driveway areas, was not observed on exterior portions of the Site.

6.1.5 Electrical Transformers/Equipment

One pad-mounted transformer was observed on the Site adjacent to the east side of the Site building. No visual evidence of spills or releases from the transformer was observed.

6.1.6 Drywells and Sumps

Drywells or sumps were not observed.

6.1.7 Pits, Ponds and Lagoons

Pits, ponds, or lagoons were not observed.

6.1.8 Wells

Evidence of wells was not observed.

6.1.9 Solid Waste

General refuse and recyclables are disposed of in 55-gallon garbage cans and recycling containers staged adjacent to the east side of the Site building. The general refuse and recyclables are regularly removed from the Site by the City.

6.1.10 Process Wastewater

Process wastewater is not generated at the Site.

6.1.11 Septic System

No evidence of septic systems was observed.

6.1.12 Stressed Vegetation

Stressed vegetation was not observed at the Site.

6.1.13 Soil and Water Sampling

No subsurface exploration or water sampling were included as part of GZA's scope of services.

6.1.14 Oil-Water Separators

Evidence of an oil-water separator was not observed.

6.1.15 Surface Water Runoff

Based on observations during the Site reconnaissance, surface water runoff on the northern portion of the Site generally drains into storm sewers located in the concrete patio and asphalt-paved parking lot north of the Site building. On the southern portion of the Site surface water generally runs off toward the south and east.

6.1.16 Abutting Properties

GZA made visual observations of abutting properties from the Site and from publicly accessible areas for evidence of hazardous substances, petroleum or petroleum products, pollutants, contaminants and controlled substances. No noteworthy observations were made.

6.1.17 Other Exterior Observations

No noteworthy observations were made.

6.2 INTERIOR OBSERVATIONS

The interior of the Site building was visually assessed for evidence of a release, use, storage, or generation of hazardous substances and petroleum products. The conditions observed are presented below.

6.2.1 Construction

The Site building is a one-story, brick building with a partial basement and a concrete foundation.

6.2.2 Heating and Cooling

The Site building is heated via natural gas and is cooled via central air conditioning.

6.2.3 Current Site Use

The Site is currently utilized as East Library within the Milwaukee Public Library system.

6.2.4 Chemical Use and Storage Areas

Household cleaning chemicals were stored in small (less than five-gallon) containers on shelves in a utility room. Four five-gallon containers of boiler cleaning chemicals were also observed in the utility room. No leaking or staining was observed on the concrete floor in association with the chemicals.

6.2.5 Hazardous Wastes Generated and Waste Storage Areas

Hazardous waste was not observed to be generated at the Site.

6.2.6 Stains or Corrosion

De minimis staining was observed around the floor drains in the utility room. Additional staining was not observed.

6.2.7 Floor Drains or Sumps

Four floor drains, one mop sink drain and two sumps were observed in the utility room, and one floor drain was observed in the ladies restroom within the Site building.

6.2.8 Asbestos-Containing Building Materials

Based on a July 17, 1990 Asbestos Report reviewed by GZA, ACBMs were previously identified in the Site building (see Section 5.0 for a list of ACBMs

identified). During the Site reconnaissance GZA observed cream-colored, textured, 12-inch by 12-inch floor tile throughout much of the first floor of the Site building that likely contains asbestos; however, the floor tile appeared to be in good condition. GZA did not observe damaged or friable suspect ACBMs in the Site building.

7.0 REGULATORY AGENCIES

The following sections are based on public information obtained from various federal, state and local agencies that maintain environmental regulatory databases. The primary databases provide information about the regulatory status of a property and incidents involving use, storage, spilling, or transportation of hazardous substances, petroleum or petroleum products, pollutants, contaminants and controlled substances. Information was gathered by GZA personnel and by a professional data search service, EDR. The EDR Radius Map™ Report With GeoCheck® detailing the federal and state regulatory information is provided in Appendix D. A discussion of the information reviewed is presented in the following sections.

7.1 FEDERAL AGENCY DATABASES

ASTM standard and supplementary databases were provided by EDR and reviewed by GZA. These reports and the search distances used to review these databases are provided in Appendix D. A review of the federal regulatory databases indicated the following:

- The current and historical Site addresses were not listed on the federal databases searched by EDR.
- Northpoint Cleaners, located approximately 125 feet northeast of the Site at 1922 East Thomas Avenue, is listed on the Resource Conservation and Recovery Act (RCRA) – Small Quantity Generator (SQG) database due to its status as a hazardous waste generator. Hazardous wastes listed for the property include F002 (spent halogenated solvents). No violations were listed. It is GZA’s opinion that this property does not currently represent a material liability to the Site due to its gradient relative to the Site.
- In addition to the property listed above, there is one Formerly Used Defense Sites (FUDS) property, one RCRA – Large Quantity Generator (LQG) property, an additional nine RCRA-SQG properties, six RCRA-Conditionally-Exempt SQG (CESQ) properties and seven RCRA-Non-Generator (NonGen) properties located

within the standard EDR search radii. GZA reviewed each of the listings and it is GZA's opinion that these properties do not currently represent a material liability to the Site due to their distance from and/or gradient relative to the Site and/or current regulatory status (i.e., "Closed").

7.2 STATE AGENCY DATABASES

ASTM standard databases, as described below, were provided by EDR and reviewed by GZA. These reports and the search distances used to review these databases are provided in Appendix D. A review of the state regulatory databases indicates the following:

- The historical Site address, 1908 East North Avenue, was identified on the EDR Historical Cleaners database as "Carpet Service Co. Cleaners" in 1947. Based on available information, the company likely performed off-Site carpet installation and cleaning (rather than on-Site dry cleaning), and it is GZA's opinion that the former presence of this occupant did not likely result in subsurface impacts to the Site. The Site was not identified on additional state databases searched by EDR.
- The property located at 2400 North Cramer Street, abutting the Site to the north beyond East Thomas Avenue, is listed on the UST database. Based on the listing, one 1,000-gallon fuel oil UST was removed from the property in October 1999.
- The Northpoint Cleaners property, located approximately 125 feet northeast of the Site at 1922 East Thomas Avenue, is listed on the Wisconsin Emergency Repair Program (WI ERP) database. Based on the listing, the activity was opened on August 26, 2008, due to the detection of chlorinated solvents in soil at the property. The current regulatory status is listed as "open." However, it is GZA's opinion that this property does not currently represent a material liability to the Site due to its lower surface elevation relative to the Site. Therefore, the Site is expected to be upgradient of the Northpoint Cleaners property.
- The property located at 2227 North Farwell Avenue, approximately 125 feet southeast of the Site beyond East North Avenue, is listed on the UST database. Based on the listing, one 1,000-gallon fuel oil UST was removed from the property in September 2009.
- The property located at 2235 North Farwell Avenue, approximately 125 feet southeast of the Site beyond East North Avenue, is listed on the leaking UST (LUST) and AUL databases. Based on information within the EDR listing, a

release of fuel oil resulted in soil contamination on the property. The LUST activity was closed on September 24, 2009, with an AUL due to residual soil impacts.

- There is one Waste Disposal Site (WDS) located between ¼- and ½-mile from the Site.
- There are an additional 42 LUST properties located within ½-mile of the Site, of which four currently have a regulatory status of “open” and the remaining 38 have received regulatory closure. The closest of the four “open” LUST properties is located approximately 300 feet south of the Site and at a lower elevation, while the remaining open LUST properties are located further than 600 feet from the Site.
- There are 56 additional UST properties located between approximately 275 feet and ¼-mile from the Site.
- There are eight AST properties located between approximately 550 feet and ¼-mile from the Site.
- There are 10 additional AUL properties located between approximately 500 feet and ½-mile from the Site.
- There is one Voluntary Cleanup Liability Exemption (VCP) property located between ¼- and ½-mile from the Site.
- There are two Brownfields properties located between ⅛- and ½-mile from the Site.
- There are an additional eight WI ERP properties located between ⅛- and ½-mile from the Site.
- There are nine Manifest properties located between approximately 400 feet and ¼-mile from the Site.
- EDR mapped several addresses in the Site vicinity that were listed on the EDR Historical Auto Stations and EDR Historical Cleaners databases based on city directories listings from the years 1925 and 1930, including (but not limited to) 1901, 1912, 1914 and 1920 North Avenue. GZA reviewed city directories dated 1925 and 1930, at the City Public Library and determined that the addresses

identified by EDR were instead located near the intersection of West North Avenue and North 19th Street (and not in the Site vicinity). A review of the 1910 Sanborn Map confirmed that the Site addresses along North Avenue historically ranged from 396 to 404 North Avenue prior to being re-numbered in the early 1930s. Therefore, the majority of properties mapped in the Site vicinity on the EDR Historical Auto Stations and EDR Historical Cleaners databases (based on city directories information dated prior to the mid-1930s) were not located on or near the Site.

It is GZA's opinion that the properties identified on the state regulatory databases, as listed above, do not currently represent a material liability to the Site due to their distance from and/or gradient relative to the Site and/or current regulatory status (i.e., "Closed").

7.3 REGULATORY AGENCY INQUIRIES

To obtain information concerning the possible release of hazardous substances or petroleum products at or near the Site, GZA searched the Wisconsin Department of Natural Resources (WDNR) Bureau of Remediation and Redevelopment Tracking System (BRRTS) and Solid and Hazardous Waste Information System (SHWIMS) databases and the Wisconsin Department of Commerce (Commerce) Tank Inventory Database.

7.3.1 Wisconsin Department of Natural Resources

GZA reviewed the online WDNR BRRTS and SHWIMS databases for information related to possible environmental issues at the Site. No environmental activities or records were listed for the current or historical Site addresses.

7.3.2 Wisconsin Department of Commerce

GZA reviewed the Commerce Tank Inventory Database and did not find records of storage tanks registered to the current or historical Site addresses.

7.4 USER-PROVIDED INFORMATION

Client, through their representative, indicated that they have no additional knowledge (other than is provided in previous sections of this report) of the property related to RECs or environmental impacts, and is not aware of a reduction in price for the Site related to environmental issues.

Client indicated that the reason for the completion of the Phase I ESA is to provide information related to the environmental condition of the Site as part of a property transaction and has a desire for the report to meet the AAI standard, as defined in 40 CFR Part 312.

7.5 CREDENTIALS

In accordance with ASTM E-1527 Section 12, the following credentials statements are provided for GZA and the Assessor for the Site. GZA is a full-service consulting firm providing environmental and geotechnical engineering services since 1964. The GZA representative responsible for completion of the Phase I ESA was Dr. Jay Karls. Dr. Karls, a licensed professional engineer in several states, is a Senior Project Manager with GZA, with over 12 years experience in environmental matters. We believe that, to the best of our knowledge and belief, Dr. Karls meets the definition of an Environmental Professional, as defined in section 312.10 of 40 CFR Part 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

9.0 FINDINGS AND CONCLUSIONS

A Phase I ESA was conducted in general accordance with ASTM Phase I Standard Practice E 1527-05 for the Site located at 1910 East North Avenue in Milwaukee, Wisconsin. The Phase I ESA included a Site reconnaissance, a review of Site history, a review of selected local, state and federal regulatory records and interviews with persons familiar with the Site. The findings provided below are based on work conducted as part of this Phase I ESA.

- The Site consists of a 1.02-acre parcel improved with an approximately 15,000 square-foot, one-story, library building with a partial basement located on the southern portion of the Site and an approximately 12,000 square-foot, asphalt-paved parking lot on the northern portion of the Site. The asphalt-paved parking lot on the northern portion of the Site is accessed via a paved entrance from North

Cramer Street and the parking lot and entrance are surrounded by grass-covered and landscaped areas.

- The Site is currently utilized as East Library, a neighborhood library within the Milwaukee Public Library system.
- North Cramer Street abuts the Site to the west, beyond which are Vitucci’s Cocktail Lounge and several residential properties. East Thomas Street abuts the Site to the north, beyond which is Salem Evangelical Lutheran Church. Westbury Bank and several commercial properties including restaurants, bars and law offices abut the Site to the east. East North Avenue abuts the Site to the south, beyond which are commercial properties including night clubs and Beans and Barley.
- The Site was historically comprised of several separate properties which were occupied with residential and commercial buildings since the Site was developed prior to 1894 until the buildings were demolished in the mid- to late 1960s, in preparation for the construction of the existing Site building. Former commercial occupants of the Site included stores, restaurants, taverns, a bakery, a carpet service company, offices, a sheet metal and furnace works, an appliance repair company and an excavating and grading business. The existing Site building and paved parking lot were constructed at the Site in 1967 and/or 1968, and have been utilized as a neighborhood library and associated parking lot since that time.
- Since the 1800s, properties abutting the Site have primarily been occupied by residential and commercial buildings. Of the current and former Site vicinity occupants, the former occupant of 2315 North Murray Avenue (Canton Laundry and Dry Cleaning, listed in the city directory dated 1960) had the potential to result in subsurface impacts at the Site due to its location (directly abutting the Site to the east) and the operations performed (dry cleaning).
- GZA reviewed an Asbestos Inspection Report for the Site building, dated July 17, 1990. The report categorized several building materials within the Site building as “Proven” or “Assumed” to contain ACBMs. GZA did not observe friable ACBMs during the Site visit.
- GZA also reviewed a report entitled “Historical Land Use Investigations of Two City of Milwaukee Parking Lots at 1910 East North Avenue and 2353 North Farwell Avenue,” prepared by the City Health Department and City DCD, dated

August 4, 2000. The report concluded, “We do not recommend a Phase II site assessment at this time. However, before any land disturbance is commence, e.g. site excavation, soil boring, etc., we recommend a systematic search for USTs and utility fixtures within both project Sites A & B. If found, the contents of the USTs should be sampled and tested for potential reuse, recycling, or disposal, according to State regulations. If found, all abandoned tanks should be properly removed, and a site assessment conducted, according to existing WDNR regulations. The tanks should also be registered with the Wisconsin Department of Commerce.”

- GZA did not observe ASTs or generation or storage of hazardous wastes during the reconnaissance of the Site.
- Evidence of USTs was not observed at the Site. However, City building records do not indicate what type of heat the former structures at the Site utilized and there is the potential that heating oil was used to heat the former residences at the Site and that ASTs or USTs were associated with former heating oil systems. However, it is possible that tanks were removed and discarded during the demolition of buildings that were historically present at the Site.
- Household cleaning chemicals were stored in small (less than five-gallon) containers on shelves in a utility room inside the Site building. Four five-gallon containers of boiler cleaning chemicals were also observed in the utility room. No leaking or staining was observed on the concrete floor in association with the chemicals.
- Two small (approximately one-gallon capacity), metal containers of gasoline were observed in a metal flammables storage cabinet staged on a concrete pad adjacent to the eastern exterior wall of the Site building. The gasoline is reportedly used to fuel a lawn mower used at the Site
- The Site is not listed on the federal databases searched by EDR.
- The historical Site address, 1908 East North Avenue, was identified on the EDR Historical Cleaners database as “Carpet Service Co. Cleaners” in 1947. Based on available information, the company likely performed off-Site carpet installation and cleaning (rather than on-Site dry cleaning), and it is GZA’s opinion that the former presence of this occupant did not likely result in subsurface impacts to the Site. The Site was not identified on additional state databases searched by EDR.

- The Site is not listed on the WDNR BRRTS, WDNR SHWIMS, or Commerce Tank Inventory databases reviewed by GZA.

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E-1527-05 of the Site located at 1910 East North Avenue in Milwaukee, Wisconsin. Any exceptions to or deletions from this practice are described in Section 1.4 of this Phase I ESA Report.

GZA did not identify RECs in connection with the Site, with the exception of the following:

1. Historical dry cleaning operations at the off-Site property directly abutting the Site to the east, 2315 North Murray Avenue (Canton Laundry and Dry Cleaning, listed in the city directory dated 1960), had the potential to impact soil and/or groundwater at the Site.

Additionally, GZA notes the following environmental concern:

1. The parcels that make up the Site may have had oil-burning furnaces and associated fuel oil storage tanks. The storage tanks may have been ASTs or USTs that may have been removed during demolition activities; however, no documentation regarding proper abandonment is available. Therefore, there is the potential that fuel oil USTs may be encountered during redevelopment activities. Please note, however, that there was no direct evidence in the information reviewed by GZA as part of this Phase I ESA of USTs being currently or historically present on the parcels that make up the Site. If encountered, the fuel oil tanks should be properly closed and disposed.
2. Based on historical sampling, ACBMs are present within the Site building. However, GZA did not observe friable ACBMs. GZA recommends that ACBMs and presumed ACBMs be properly managed during future building renovation activities and that ACBMs be abated if rendered friable.

APPENDIX A

Limitations

PHASE I ENVIRONMENTAL SITE ASSESSMENT LIMITATIONS

Uncertainty not Eliminated

1. No ESA can eliminate the uncertainty of the possible presence of RECs. This report was prepared to help reduce, not to eliminate, such uncertainties. Consistent with ASTM Guidance (ASTM E1527-05), our opinions were developed in light of the constraints imposed by time and budget.

Limits to Observations

2. As indicated in the report, we made observations for evidence of RECs at the Site and for conditions at adjoining properties that could result in RECs at the Site. Observations were made of the Site and of structures on the Site as indicated within the report. Where access to portions of the Site or to structures on the Site was unavailable or limited, GZA renders no opinion as to the presence of hazardous substances, hazardous wastes, or petroleum products, or to the presence of indirect evidence relating to these materials in that portion of the Site or structure. In addition, GZA renders no opinion as to the presence of hazardous substances, hazardous wastes, or petroleum products, or to the presence of indirect evidence relating to these materials, where direct observation of the interior walls, floor, or ceiling of a structure on the Site was obstructed by objects or coverings on or over these surfaces. Our opinions are necessarily based on these limited observations. Additionally, some activities or events of potential interest, at the Site or on adjoining properties, may have been transient and not observable at the time of our visit.

Reliance on Information from Others

3. We relied upon information made available by federal, state and local authorities, the key site manager and others. We did not attempt to independently verify the accuracy or completeness of that information. Inconsistencies in this information, which we have noted, if any, are discussed in the report.

Additional Information

4. Additional opinions or information regarding RECs may be developed by the lender, seller, buyer, or other parties. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

DRYCLEANERS: Drycleaning facilities enrolled in the Five Star Recognition Program. The primary focus of the Five Star program is to encourage reductions in the use and emissions of perchloroethylene (perc) a common but potentially hazardous drycleaning solvent. Participating cleaners pursue recycling opportunities, spill prevention strategies, more efficient solvent use, and more wet cleaning to reduce their perc consumption.

An online review and analysis by GZA GEOENVIRONMENTAL, INC. of the DRYCLEANERS list, as provided by EDR, and dated 01/16/2009 has revealed that there is 1 DRYCLEANERS site within approximately 0.25 miles of the target property.

EDR Historical Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

An online review and analysis by GZA GEOENVIRONMENTAL, INC. of the EDR Historical Cleaners list, as provided by EDR, has revealed that there are 7 EDR Historical Cleaners sites within approximately 0.25 miles of the target property.

WI-ESR (Wisconsin - Environmental System Registry) is a database that contains core information about facilities, organizations, and people related to Wisconsin's DNR (Department of Natural Resources).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FUDS Description Details:

Henry Ford constructed the original building in 1914 as a car assembly plant. This portion has a brick exterior and is the east half of the present building. About 1940, the DoD extended the building to Farwell Avenue, approximately doubling its size

e. The entire site is composed of one five-story building approximately 491,000 square feet in size and adjacent grounds which measure approximately 200 ft. by 200 ft. Total land area is approximately 2 acres.

FUDS History Details:

The first DoD use of Air Force Plant No. 58 was by the A.O. Smith Company, a U.S. government contractor that built landing struts during World War II. The next government contractor to use the building was A.C. (Delco) Spark Plug, owned by General Motors Corporation, which built guidance systems for the U.S. Air Force. After July 1971, title was conveyed to the University of Wisconsin. Investigatory activities for former DoD generated substances are the subject of the FUDS Program involvement.

LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

WI-ESR (Wisconsin - Environmental System Registry) is a database that contains core information about facilities, organizations, and people related to Wisconsin's DNR (Department of Natural Resources).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 299674

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

WI-ESR (Wisconsin - Environmental System Registry) is a database that contains core information about facilities, organizations, and people related to Wisconsin's DNR (Department of Natural Resources).

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

WI-ESR (Wisconsin - Environmental System Registry) is a database that contains core information about facilities, organizations, and people related to Wisconsin's DNR (Department of Natural Resources).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

WI-ESR (Wisconsin - Environmental System Registry) is a database that contains core information about facilities, organizations, and people related to Wisconsin's DNR (Department of Natural Resources).

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

BRRTS: Bureau of Remediation & Redevelopment Tracking System

BRRTS is a tracking system of contaminated sites. It holds key information for finding out more about a site or an activity. Activity types included are: Abandoned Container - An abandoned container with potentially hazardous contents recovered from a site. No discharge to the environment occurs. If the container did release a hazardous substance, a spill would be associated with the site. Superfund - is a federal program created by Congress in 1980 to finance cleanup of the nation's worst hazardous waste sites. VPLE - Voluntary Property Liability Exemptions apply to sites in which a property owner conducts an environmental investigation and cleanup of an entire property and then receives limits on their future liability. General Property - Environmental actions which apply to the property as a whole, rather than a specific source of contamination, such as the LUST or environmental repair site. Examples would be off-site letters, municipal liability clarification letters, lease letters, voluntary party liability exemption actions, and general liability clarification letters.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

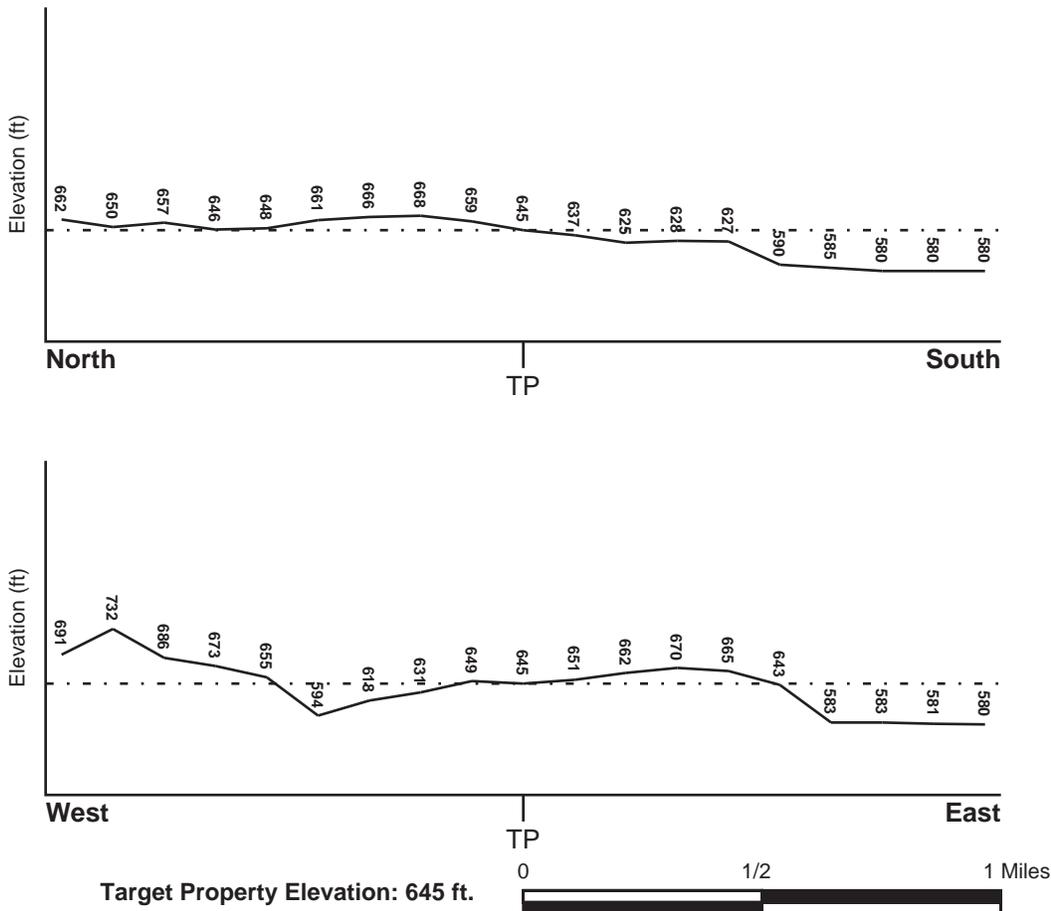

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
