These measures are reassessed every Friday but advancement through the phases can only occur 14 days after we are in a new phase. Today is the 11-week mark for Phase 4.1. This week, we are seeing a statistically significant positive trend and have moved into the **RED** for cases and testing. The slope of linear regression is 0.27 with a P-value of .009; 95% CI: 0.10-0.44 and our positivity rate has increased; it is now 10.2 % up from 7.7% last week. We will hold in phase 4.1 and reassess our progress next week, October 23, 2020 as a consistent statistically significant decline is our goal. MHD will continue to monitor the situation to determine if additional protective measures are necessary to reduce the spread of COVID-19.
