## Respiratory Illnesses In the News

US flu activity is on the rise: <https://www.cidrap.umn.edu/influenza-general/us-flu-activity-rise>

### Overview

#### County

- There were 15 influenza-associated hospitalizations reported in Milwaukee County during the week ending on November 29, 2025. From September 28, 2025 through November 29, 2025, there have been 33 reported influenza-associated hospitalizations in Milwaukee County (20 City of Milwaukee residents).

#### State

- Statewide respiratory illness levels are low.
- Influenza and COVID-19 activity are increasing based on emergency department data and laboratory testing data.
- Rhinovirus/enterovirus and parainfluenza virus detections in laboratory data are elevated but are decreasing.

#### National

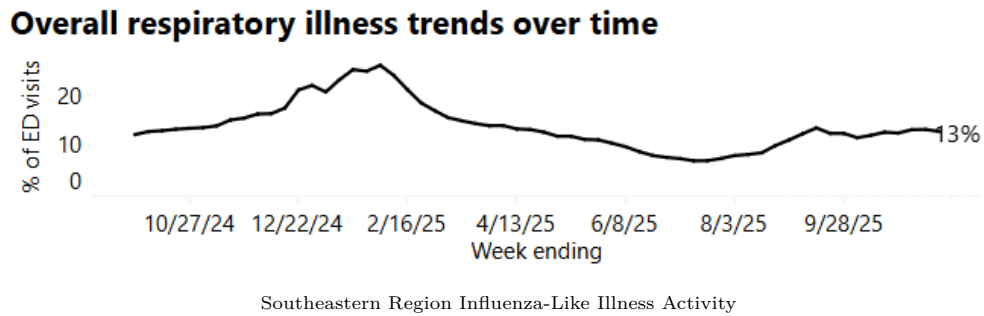

- Seasonal influenza activity is increasing.
- 0 influenza-associated pediatric deaths occurred during this week.
- The most frequently reported influenza viruses this week were influenza A(H3N2).

#### CDC Pediatric Data (Since Week 40)

2025-26 To Date: Total Deaths	2024-25 To Date: Total Deaths	Pediatric Deaths This Week	Notes on Deaths
0	287	0	No influenza-associated pediatric deaths occurring during the 2025-2026 season have been reported to CDC.

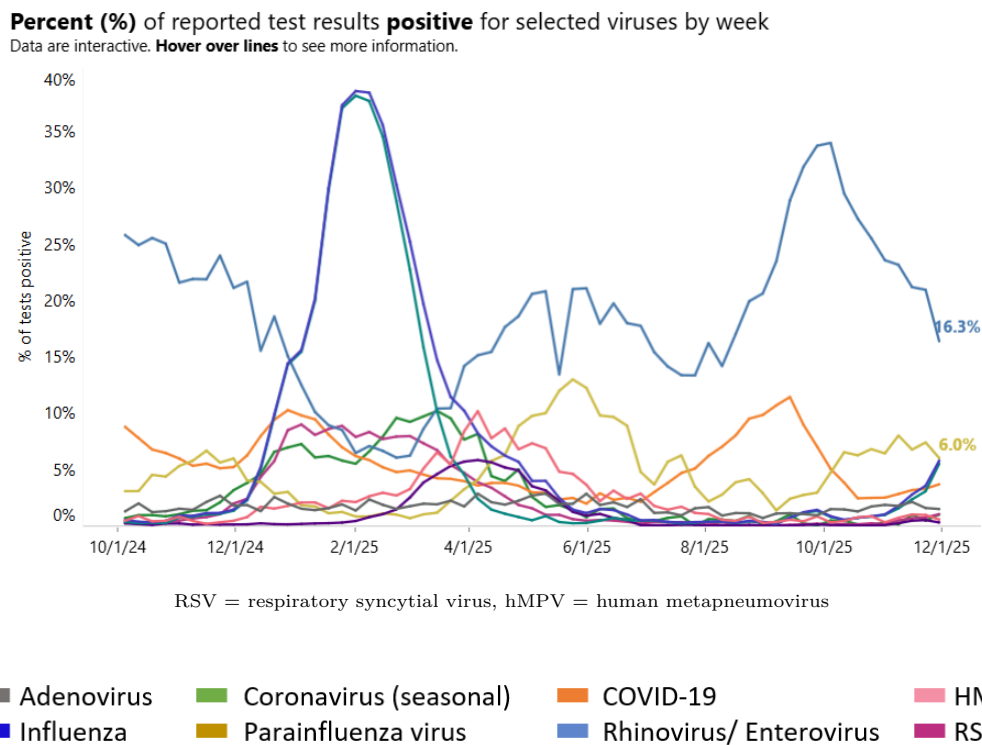

## Statewide and Regional Influenza-like Illness Activity

Influenza-like illness levels were low statewide and low in the southeastern region of the state.

Wisconsin Department of Health Services Respiratory Virus Surveillance, November 29, 2025

## Respiratory Virus Laboratory Surveillance

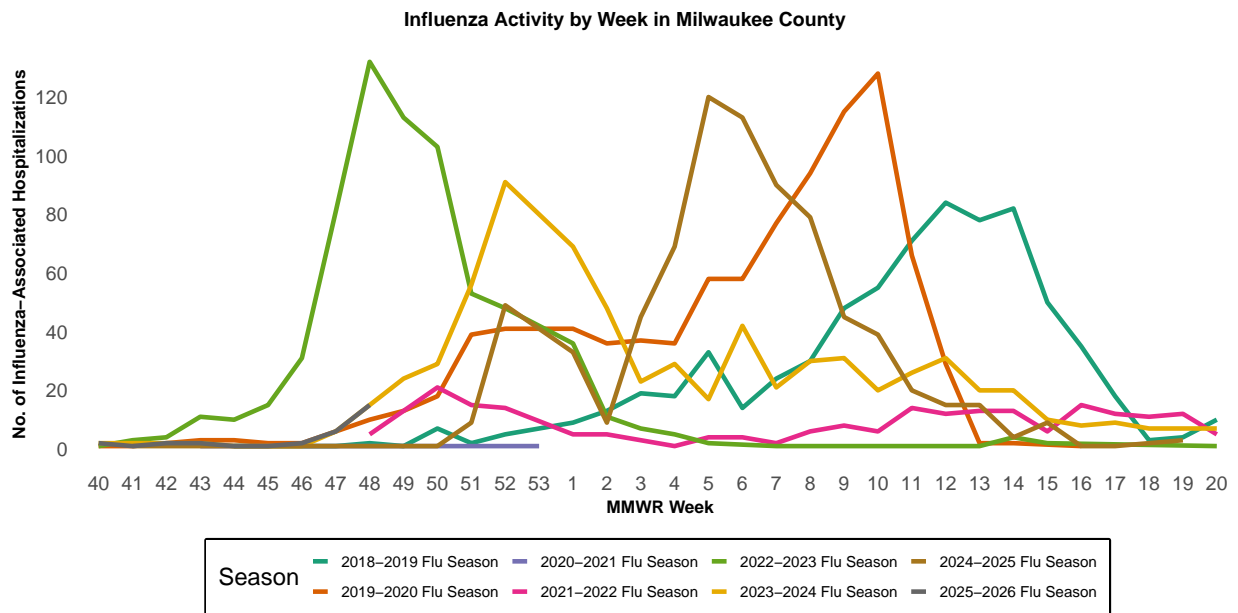

Wisconsin Department of Health Services Respiratory Laboratory Testing Data, November 29, 2025

## Milwaukee County Influenza Activity

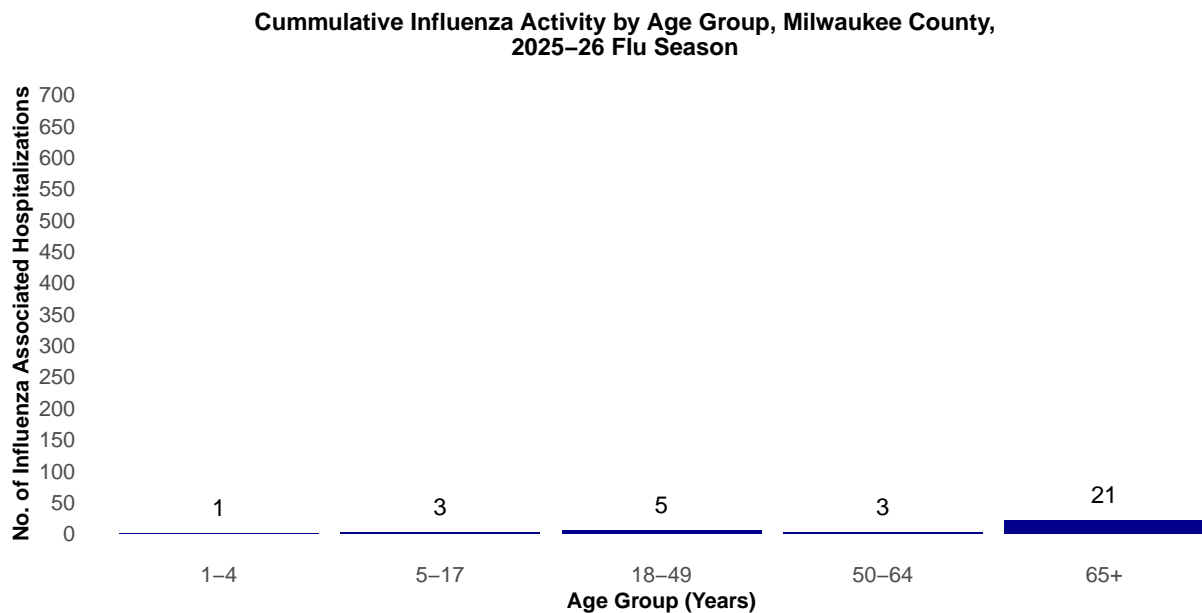

From September 28, 2025 through November 29, 2025 there have been 33 reported influenza-associated hospitalizations in Milwaukee County.

### Milwaukee County Influenza-Associated Hospitalizations

\*Flu activity was unusually low in the 2020-2021 flu season, despite high levels of testing. COVID-19 mitigation measures such as wearing face masks, social distancing, staying home, and school closures, in addition to flu vaccination, likely contributed to the low flu activity during this season.

### Milwaukee County Influenza-Associated Hospitalizations by Age Group MMWR Week 40, 2024 through Week 48, 2024

## Influenza Testing Data

### Public Health Laboratory Influenza Testing Data To-Date (Since Week 40)

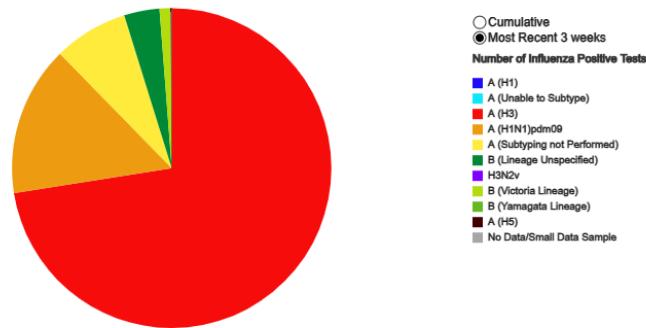

CDC Laboratory Testing predominant subtype is A. The predominant influenza A subtype is H3N2 and the predominant influenza B subtype is Victoria.

Lab	Number Tested to date	Number Positive to date	Most Recent Week Percent Positive
CDC	507,414	11,108	3,708/52,021 (7.1%)
WSLH	-	-	332/5,771 (5.8%)
MHDL	NA	NA	NA

### National Influenza Testing Data, CDC FluView

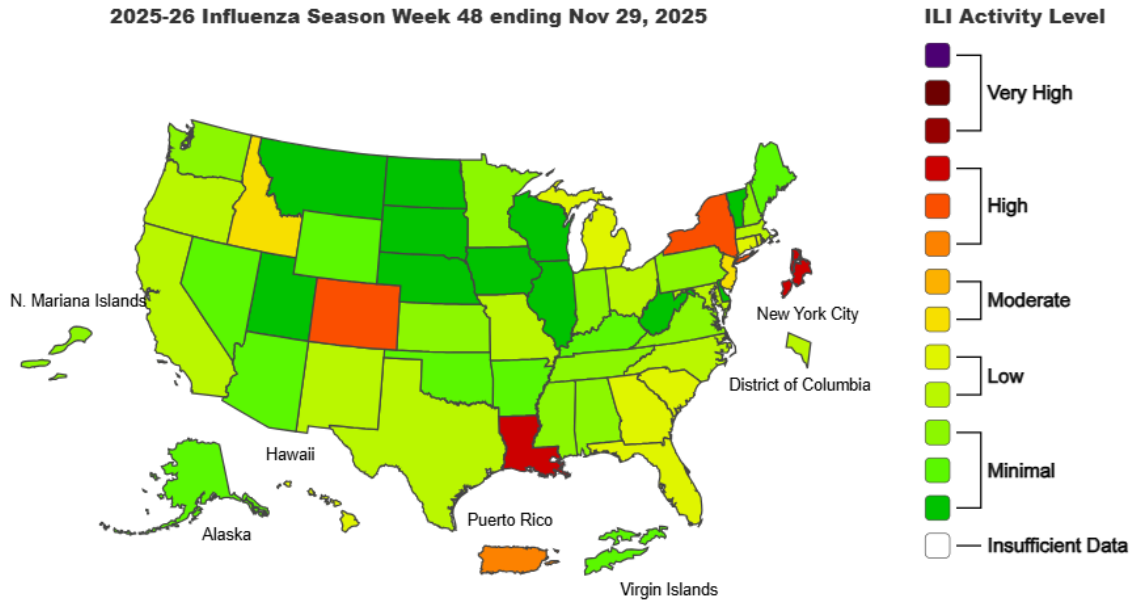

Influenza Positive Tests Reported to CDC by Public Health Laboratories, National Summary, 2025-26 Season, week ending Nov 29, 2025  
Reported by: U.S. Influenza/NREVSS Collaborating Laboratories and ILINet

Emergency Room Visits Due to Flu

Emergency Room Visits Due to RSV

## Respiratory Illness Immunization Rates of Milwaukee County Residents, 2025-2026 Season

The Wisconsin Department of Health Services (DHS) Immunization Program has dashboards for statewide and county specific immunization rates for influenza vaccinations, COVID-19 vaccinations, and both infant and adult RSV vaccinations. Each immunization dashboard contains demographic data for people receiving vaccines.

To access these dashboards:

- COVID-19: <https://www.dhs.wisconsin.gov/immunization/covid-19-vaccine-data.htm>
- Influenza: <https://www.dhs.wisconsin.gov/immunization/influenza.htm>
- RSV: <https://www.dhs.wisconsin.gov/immunization/rsv-vaccine-data.htm>

COVID-19 and RSV dashboards are updated weekly year-round and the influenza dashboard is updated weekly during the flu season.

### Influenza Vaccine Composition 2025-2026 Influenza Season

All standard-dose flu shots will be a trivalent formulation. The trivalent vaccines for use in the 2025-2026 influenza season contain the following:

Egg-based vaccines

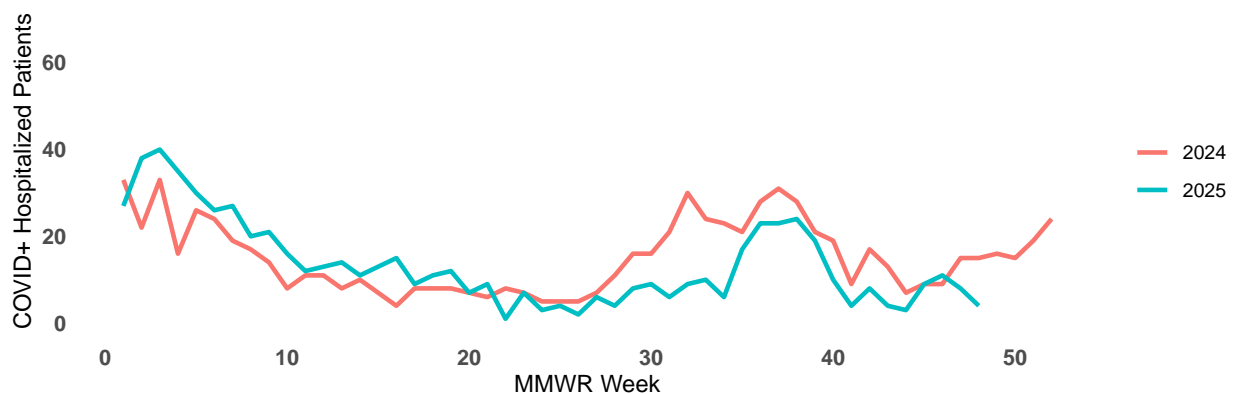

- an A/Victoria/4897/2022 (H1N1)pdm09-like virus;
- an A/Croatia/10136RV/2023 (H3N2)-like virus; and
- a B/Austria/1359417/2021 (B/Victoria lineage)-like virus

Cell- or recombinant-based vaccines

- an A/Wisconsin/67/2022 (H1N1)pdm09-like virus;
- an A/District of Columbia/27/2023 (H3N2)-like virus; and
- a B/Austria/1359417/2021 (B/Victoria lineage)-like virus

## COVID-19 Activity

### Hospitalized Patients that are COVID-19 Positive Timeline, Milwaukee County

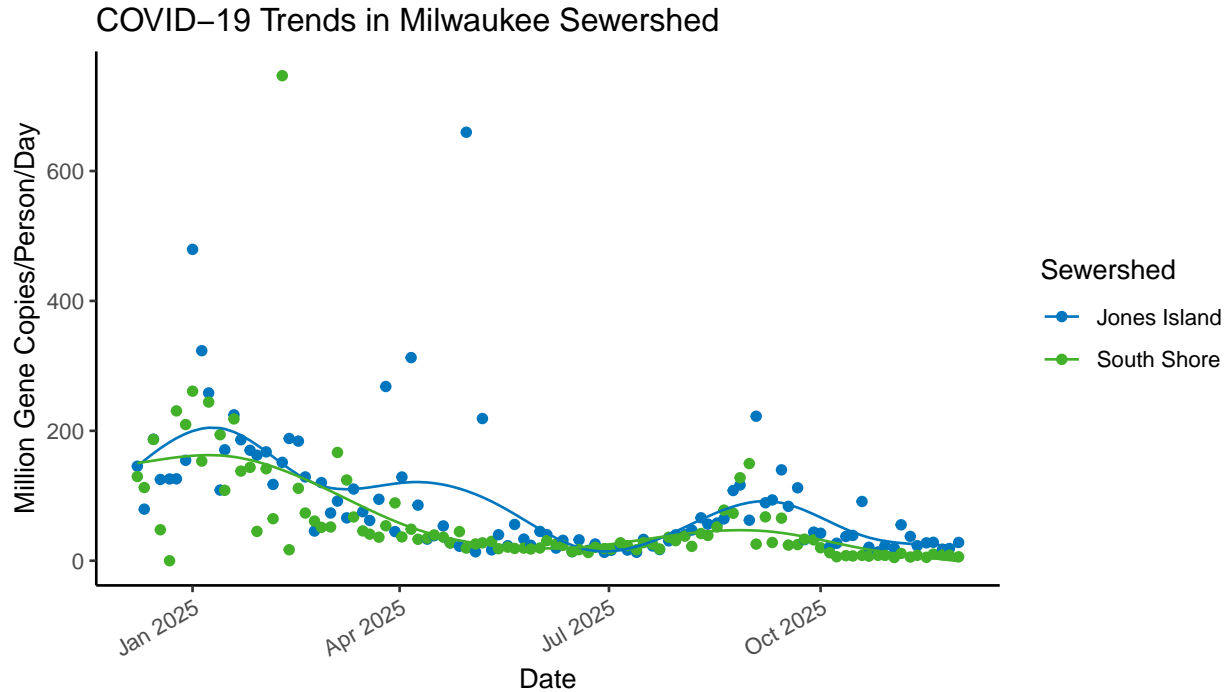

Data Source: WEDSS  
Last Update: 2025-11-28

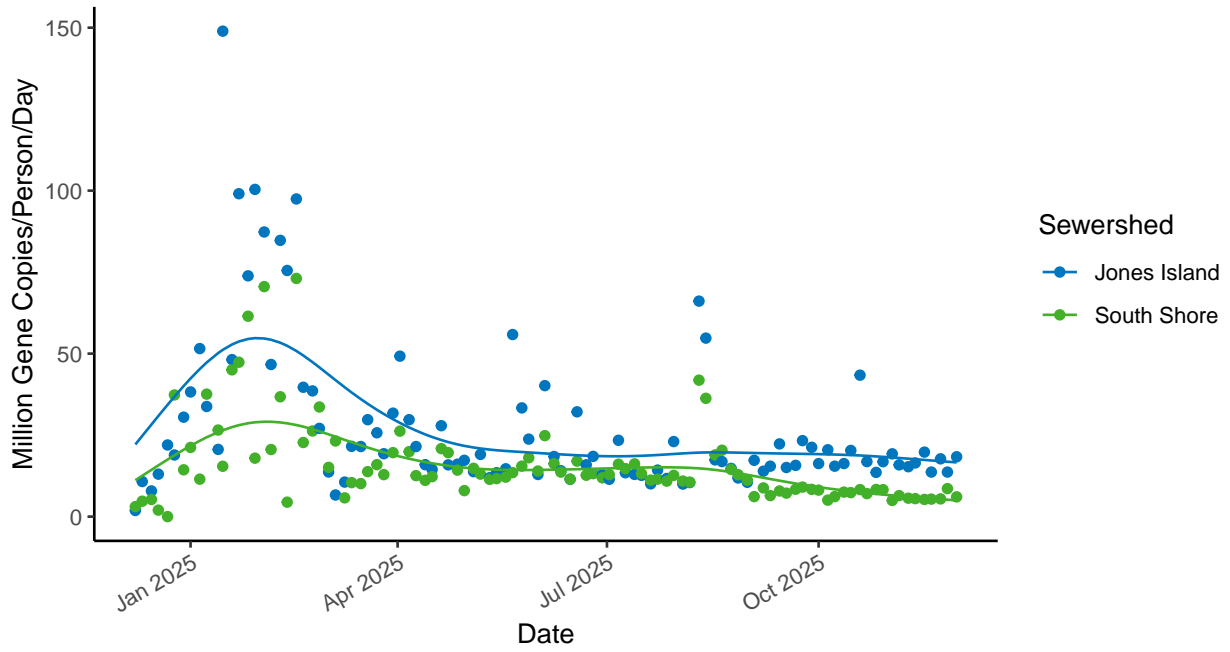

## Wastewater Disease Surveillance - Respiratory Illnesses

Wastewater disease surveillance is a powerful tool that detects illness before people start to show symptoms. MHD Laboratory does routine disease surveillance from wastewater samples at Milwaukee Metropolitan Sewerage Districts collection points, Jones Island and South Shore. Samples are taken twice weekly at each site. Wastewater disease surveillance can detect a wide variety of illnesses. At MHD, we test for COVID-19, influenza A, influenza B, and RSV respiratory pathogens.

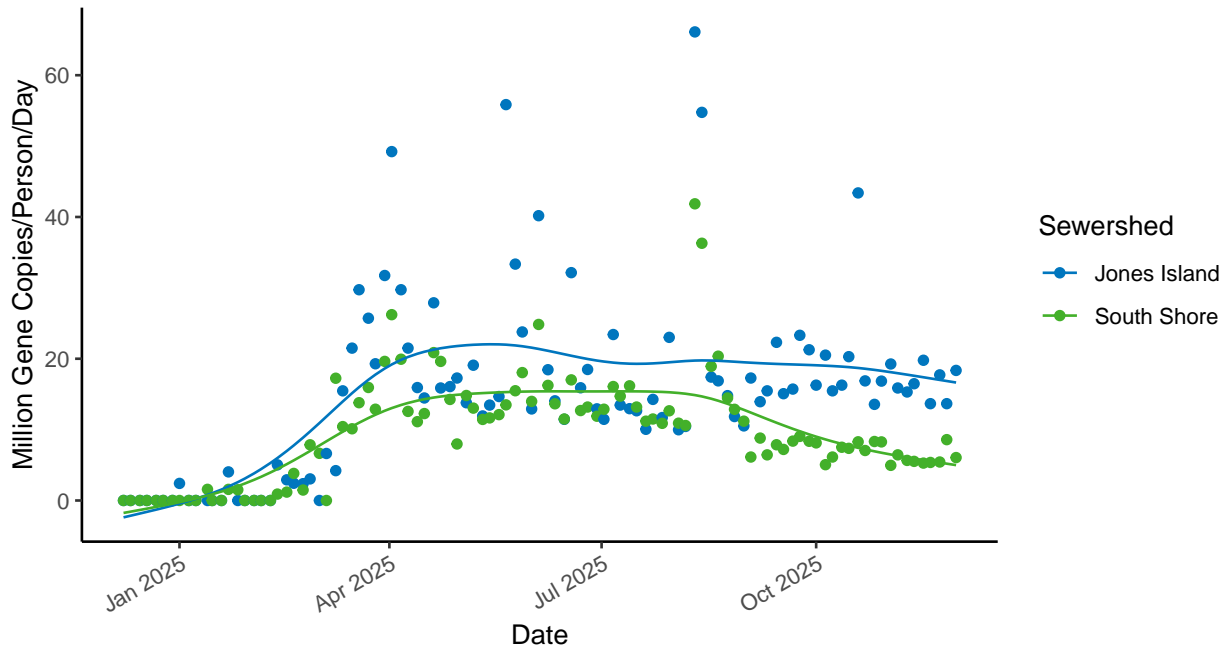

When interpreting wastewater surveillance data, the trend is the most important indicator of disease level in the population. Each of the plots below include a spline that represents the trend of illnesses.

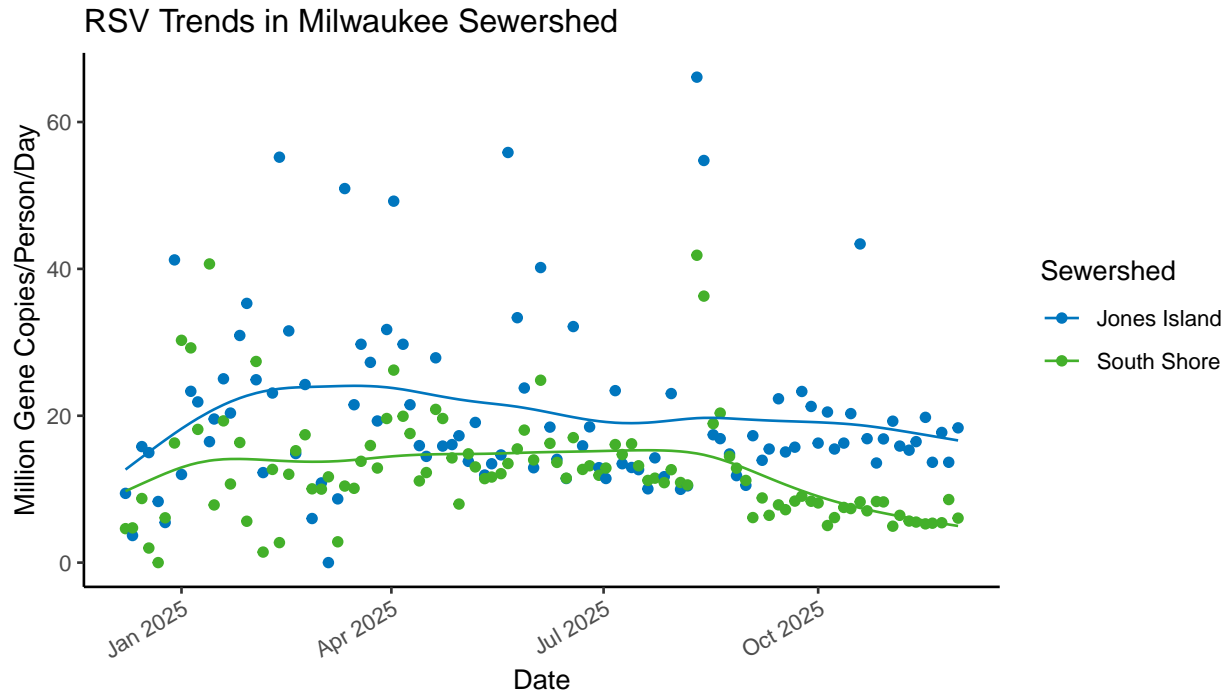

Flu A Trends in Milwaukee Sewershed

Flu B Trends in Milwaukee Sewershed

To see more interactive wastewater surveillance data, visit the MHD respiratory illness dashboard at <https://milwaukee.gov/wastewater>.

### Data Source Details

*ESSENCE:* ESSENCE is a national database that shows Emergency Department (ED) Visits. ED Visits shown in this report include anyone who visits an ED in Milwaukee County, regardless of if they live in the county, who had a Chief Complaint or Discharge Diagnosis with a respiratory illness. The data from this source are great for showing early detection of changes to illness trends, but is not appropriate for determining exact case counts or true disease burden.

*WEDSS:* WEDSS is the Wisconsin Electronic Disease Surveillance System where over 100 reportable conditions are stored. WEDSS uses clinical data from healthcare providers and local health departments, including the two clinical diagnoses that are used in this report - Influenza-Associated Hospitalizations and COVID-19-Associated Hospitalizations. When using clinical diagnosis criteria, data are often a few days behind in showing illness trends in the community due to the time it takes to make a formal clinical diagnosis.

*Laboratory Test Data:* The laboratory testing data in this report comes from many different public health laboratories including the Milwaukee Health Department Laboratory and Wisconsin State Lab of Hygiene. The Centers for Disease Control and Prevention provide national data from public health laboratories nationwide. Similar to data from WEDSS, laboratory testing data is often a few days behind in showing illness trends due to the time consuming nature of testing patient specimen.

*Wastewater Surveillance Data:* Wastewater Disease Surveillance data in this report is generated by the Milwaukee Health Department Laboratory in collaboration with the Milwaukee Metropolitan Sewerage District.
