Respiratory Illnesses In the News

DHS launches new Pertussis dashboard: <https://www.dhs.wisconsin.gov/immunization/pertussis.htm>

Twin Cities sees highest weekl hospitalizations from influenza in past four years: <https://www.mprnews.org/story/2025/01/16/flu-is-flying-twin-cities-sees-highest-weekly-hospitalizations-in-past-four-years>

Overview

County

- There were 6 influenza-associated hospitalizations reported in Milwaukee County during the week ending on January 11, 2025. From September 29, 2024 through January 11, 2025, there have been 97 reported influenza-associated hospitalizations in Milwaukee County (65 City of Milwaukee residents).

State

- Statewide influenza-like illness activity is high. Influenza activity is high and increasing based on our surveillance data.
- COVID-19 and RSV activity are elevated, RSV activity is particularly high in children under 5.
- To read about our recent human case of highly pathogenic avian influenza A(H5N1) go to: www.dhs.wisconsin.gov/outbreaks.

National

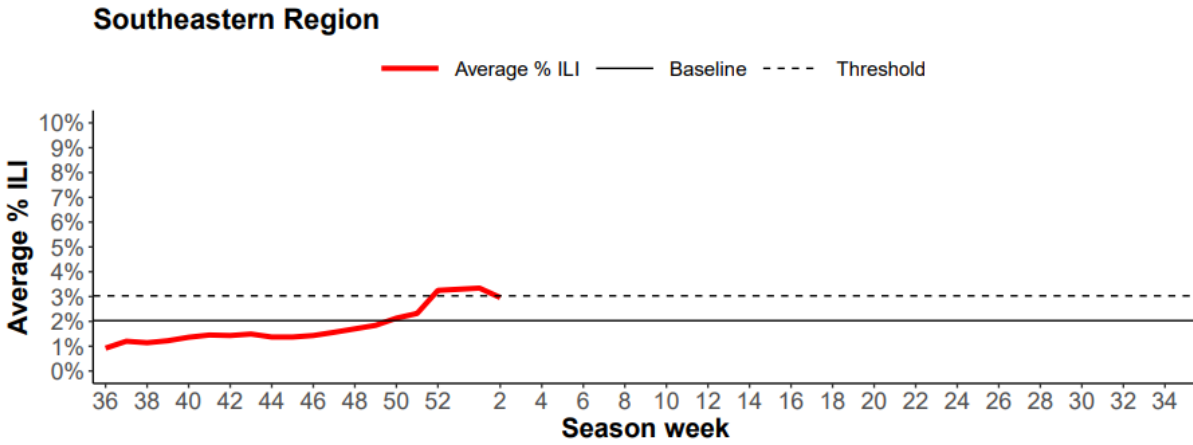

- Seasonal influenza remains elevated across most of the country. This week 10 jurisdiction experienced moderate influenza activity and 35 jurisdictions experienced high or very high activity.
- 11 influenza-associated pediatric deaths occurred during this week.
- Influenza A(H1N1)pdm09 and A(H3N2) were the predominant viruses this week.

CDC Pediatric Data (Since Week 40)

2024-25 To Date: Total Deaths	2023-24 To Date: Total Deaths	Pediatric Deaths This Week	Notes on Deaths
27	206	11	Eleven influenza-associated pediatric deaths occurring during the 2024-2025 season were reported to CDC during Week 2. The deaths occurred during weeks 51 and 52 of 2024 and during weeks 1 and 2 of 2025 (the weeks ending December 21 and December 28 of 2024 and January 4 and January 11 of 2025). All 11 deaths were associated with influenza A viruses. Six of the influenza A viruses had subtyping performed; three were A(H1N1) viruses, and three were A(H3N2) viruses. A total of 27 influenza-associated pediatric deaths occurring during the 2024-2025 season have been reported to CDC..

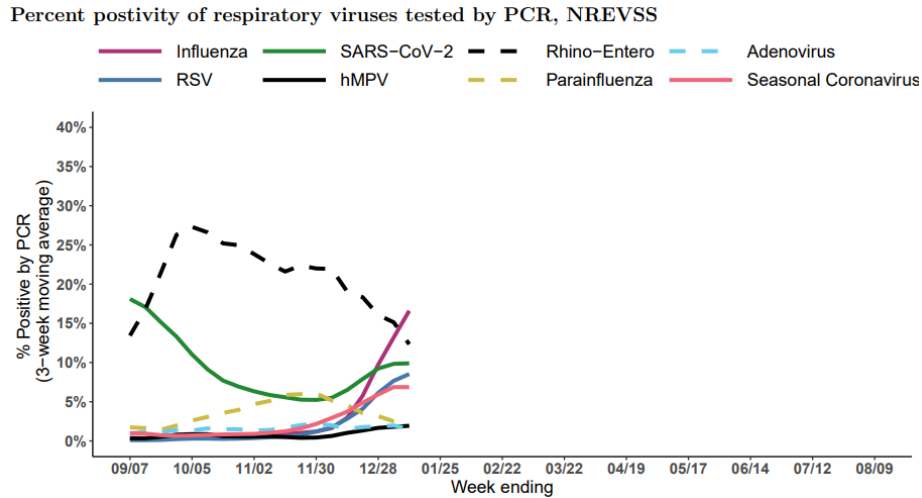

Statewide and Regional Influenza Activity

Influenza-like illness levels were above baseline statewide and above baseline in the southeastern region of the state.

Wisconsin Department of Health Services Respiratory Virus Surveillance Report, January 11, 2025

Respiratory Virus Laboratory Surveillance

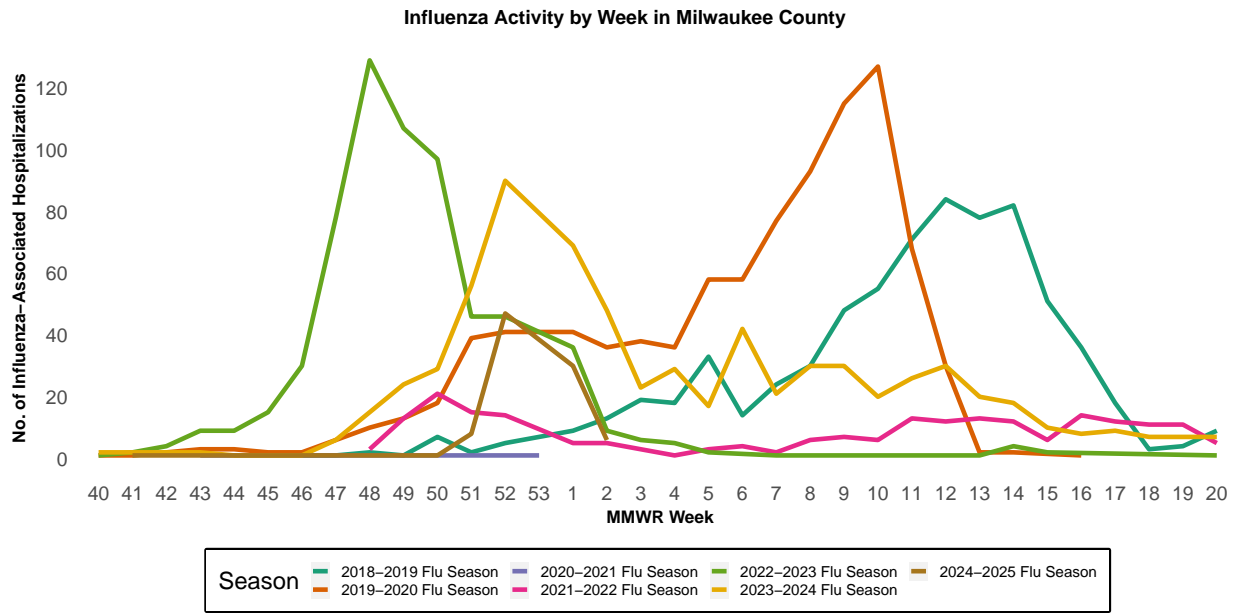

RSV = respiratory syncytial virus, hMPV = human metapneumovirus

Wisconsin Department of Health Services Respiratory Virus Surveillance Report, January 11, 2025

Milwaukee County Influenza Activity

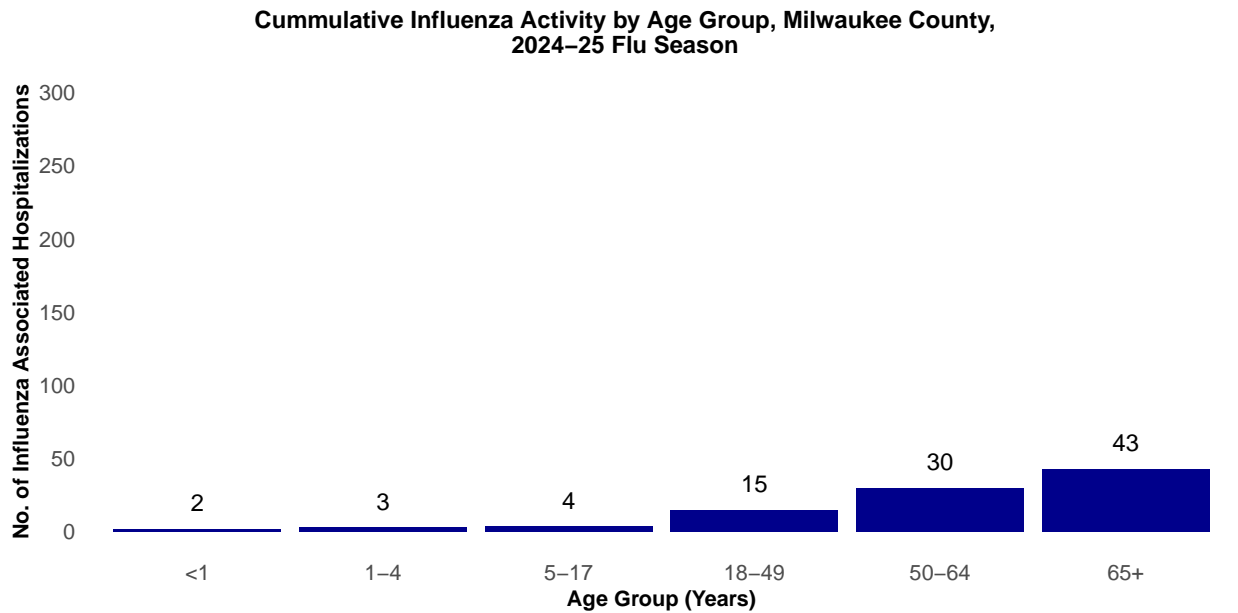

From September 29, 2024 through January 11, 2025 there have been 97 reported influenza-associated hospitalizations in Milwaukee County.

Milwaukee County Influenza-Associated Hospitalizations

*Flu activity was unusually low in the 2020-2021 flu season, despite high levels of testing. COVID-19 mitigation measures such as wearing face masks, social distancing, staying home, and school closures, in addition to flu vaccination, likely contributed to the low flu activity during this season.

Milwaukee County Influenza-Associated Hospitalizations by Age Group MMWR Week 40, 2024 through Week 2, 2024

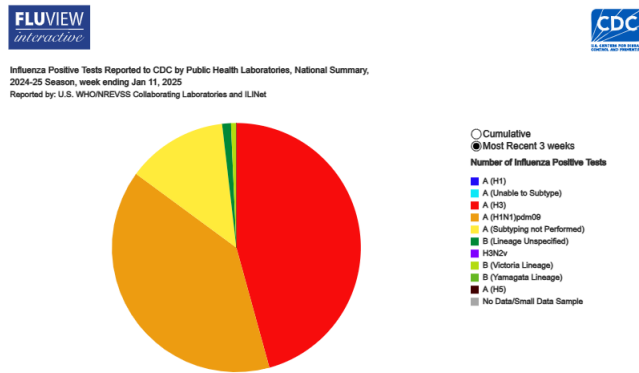

Influenza Testing Data

Public Health Laboratory Influenza Testing Data To-Date (Since Week 40)

Lab	Number Tested to date	Number Positive to date	Most Recent Week Percent Positive	Predominant A Subtype and Strain	Predominant B Strain	Predominant Type (A or B)
CDC	1,389,448	112,302	21,655/115,267 (18.8%)	H3N2	Victoria	A
WSLH	-	-	3,314/16,596 (20%)	Unknown	Unknown	A
MHDL	4	1	1/4 (25%)	N/A	N/A	B

Respiratory Illness Emergency Department Visits in Milwaukee County

Respiratory Illness Immunization Rates of Milwaukee County Residents, 2024-2025 Season

The Wisconsin Department of Health Services (DHS) Immunization Program has dashboards for statewide and county specific immunization rates for influenza vaccinations, COVID-19 vaccinations, and both infant and adult RSV vaccinations. Each immunization dashboard contains demographic data for people receiving vaccines.

To access these dashboards:

- COVID-19: <https://www.dhs.wisconsin.gov/immunization/covid-19-vaccine-data.htm>
- Influenza: <https://www.dhs.wisconsin.gov/immunization/influenza.htm>
- RSV: <https://www.dhs.wisconsin.gov/immunization/rsv-vaccine-data.htm>

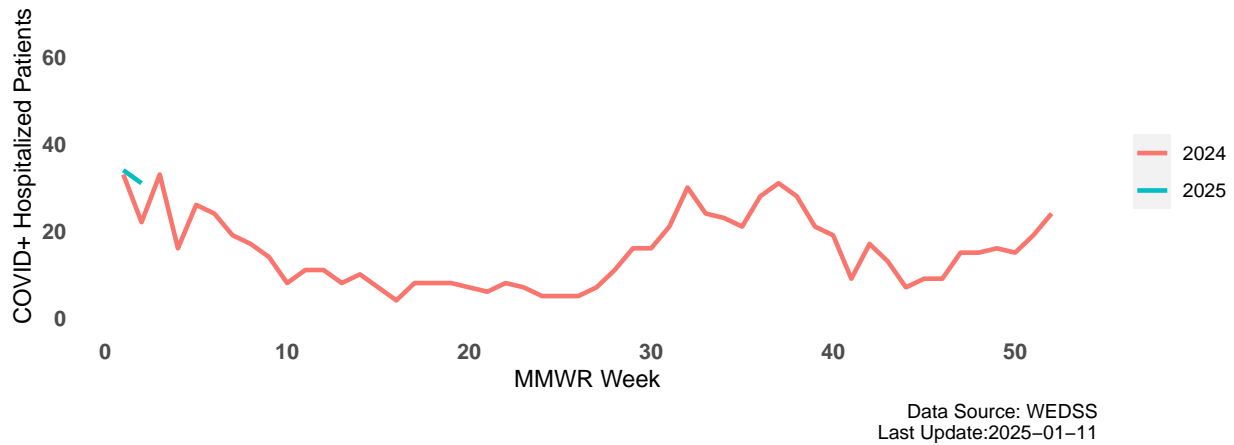

COVID-19 and RSV dashboards are updated weekly year-round and the influenza dashboard is updated weekly during the flu season.

Influenza Vaccine Composition 2022-2023 Influenza Season All standard-dose flu shots will be a trivalent formulation. The trivalent vaccines for use in the 2024-2025 influenza season contain the following:

- an A/Victoria/4897/2022 (H1N1)pdm09-like virus;
- an A/Thailand/8/2022 (H3N2)-like virus; and
- a B/Austria/1359417/2021 (B/Victoria lineage)-like virus

Wastewater Disease Surveillance - Respiratory Illnesses

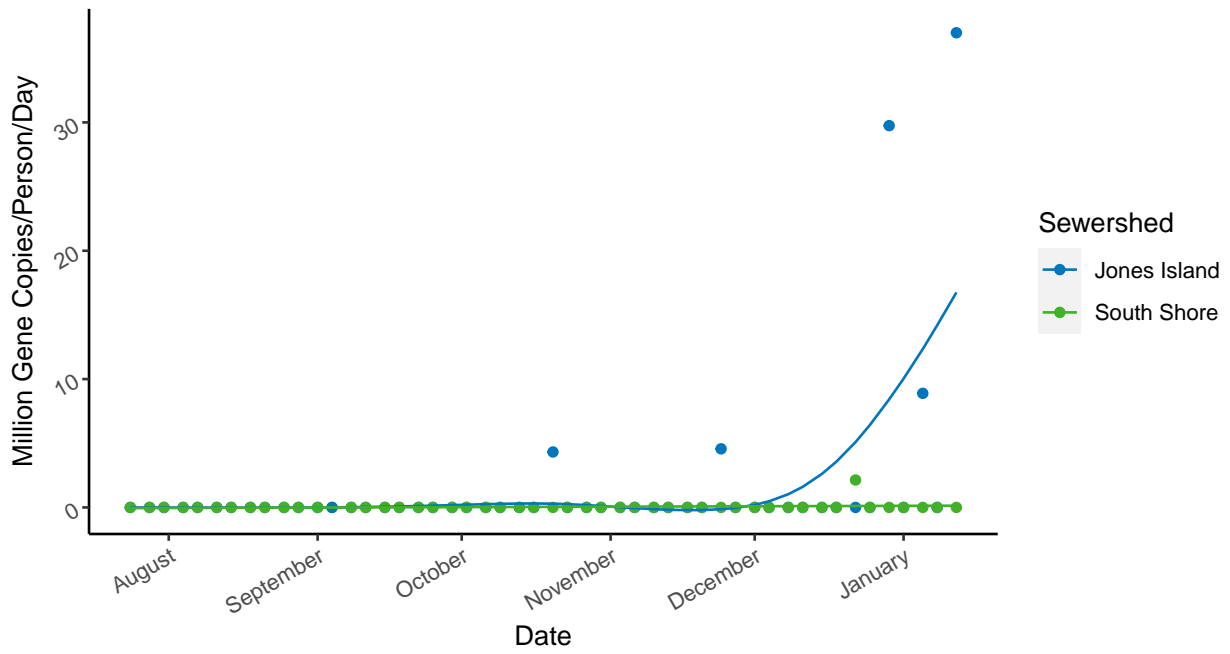

Wastewater disease surveillance is a powerful tool that detects illness before people start to show symptoms. MHD Laboratory does routine disease surveillance from wastewater samples at Milwaukee Metropolitan Sewerage Districts collection points, Jones Island and South Shore. Samples are taken twice weekly at each site. Wastewater disease surveillance can detect a wide variety of illnesses. At MHD, we test for COVID-19, influenza A, influenza B, and RSV respiratory pathogens.

When interpreting wastewater surveillance data, the trend is the most important indicator of disease level in the population. Each of the plots below include a spline that represents the trend of illnesses.

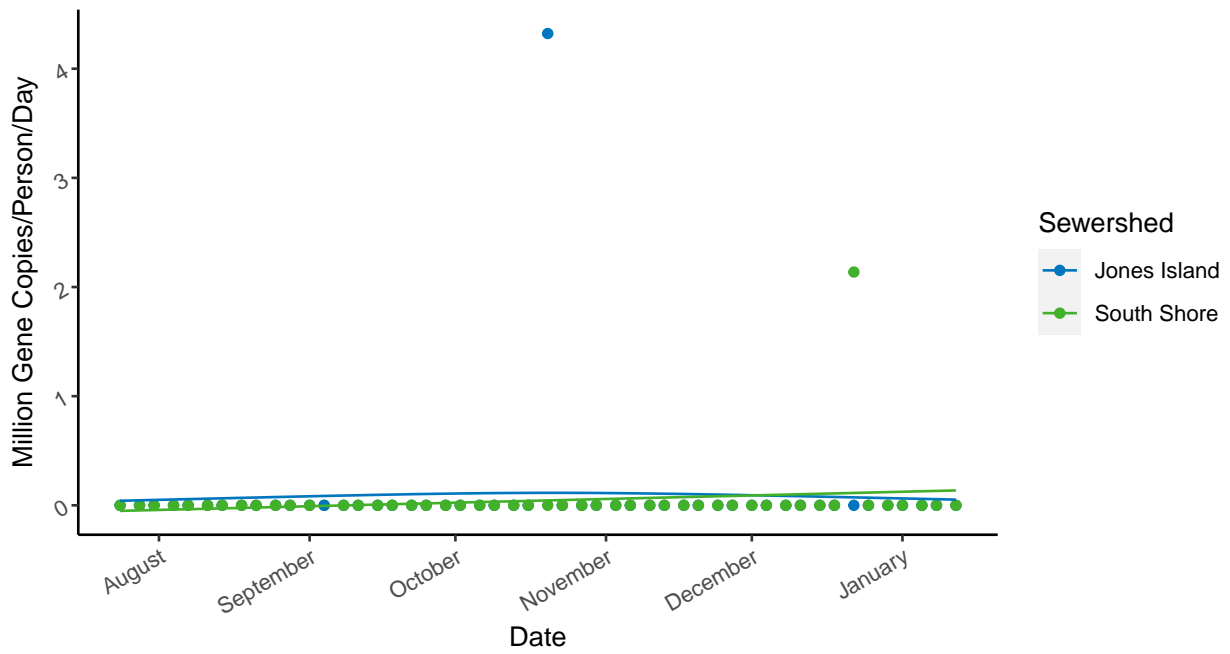

COVID-19 Trends in Milwaukee Sewershed

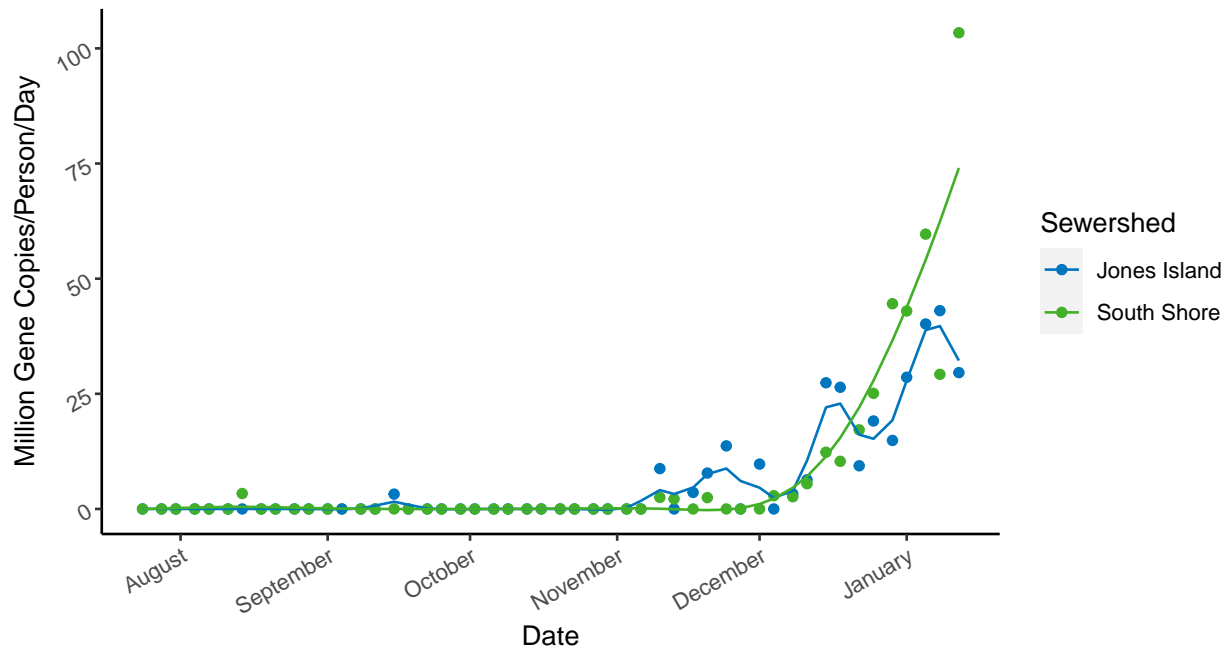

Flu A Trends in Milwaukee Sewershed

Flu B Trends in Milwaukee Sewershed

RSV Trends in Milwaukee Sewershed

To see more interactive wastewater surveillance data, visit the MHD respiratory illness dashboard at <https://milwaukee.gov/wastewater>.
