Overview

County

- There were 0 influenza-associated hospitalizations reported in Milwaukee County during the week ending on June 15, 2024. From October 1, 2023 through June 15, 2024, there have been 690 reported influenza-associated hospitalizations in Milwaukee County (526 City of Milwaukee residents).

State

- COVID-19, influenza, and RSV continued to circulate at low levels in Wisconsin. However, COVID-19 activity is increasing.
- Influenza-like illness (ILI) activity remains low in Wisconsin.
- Rhino/enterovirus and parainfluenza virus activities are elevated in Wisconsin.

National

- Seasonal influenza activity remains low nationally. This week no jurisdictions experienced moderate or high activity. Wisconsin had minimal activity.
- 3 influenza-associated pediatric deaths occurred during this week.
- Influenza A(H1N1)pdm09, A(H3N2) and B viruses were all co-circulating this week.

Influenza Vaccine Composition 2022-2023 Influenza Season All standard-dose flu shots will be quadrivalent (no trivalent standard-dose flu shots will be available this season). The quadrivalent vaccines for use in the 2023-2024 influenza season contain the following:

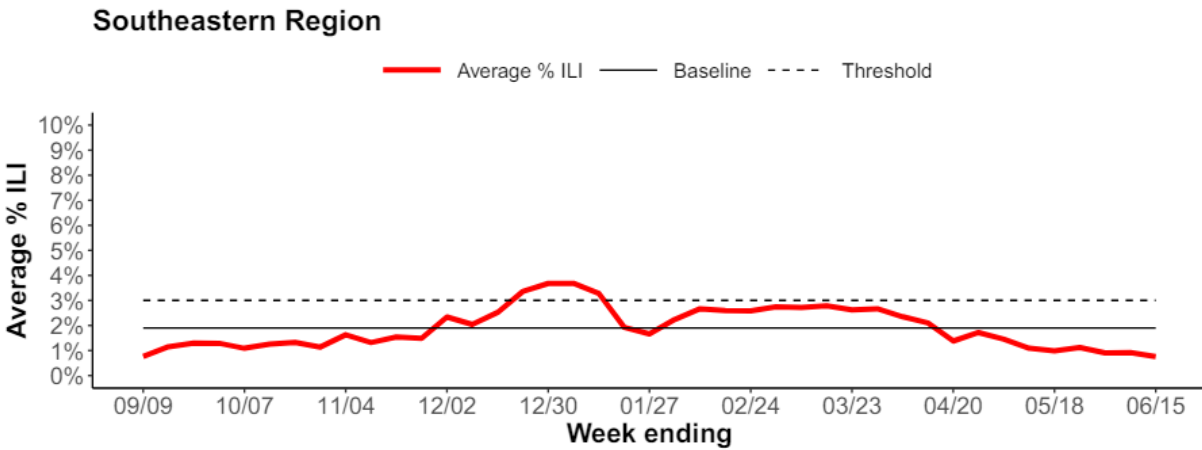

- an A/Victoria/4897/2022 (H1N1)pdm09-like virus;
- an A/Darwin/9/2021 (H3N2)-like virus;
- a B/Austria/1359417/2021 (B/Victoria lineage)-like virus; and
- a B/Phuket/3073/2013 (B/Yamagata lineage)-like virus

CDC Pediatric Data (Since Week 40)

2023-24 To Date: Total Deaths	2022-23 To Date: Total Deaths	Pediatric Deaths This Week	Notes on Deaths
178	180	3	Three influenza-associated pediatric deaths occurring during the 2023-2024 season were reported to CDC during Week 24. Two deaths occurred during Week 11 (the week ending March 16, 2024). One of the deaths was associated with an influenza A(H3) virus and the other was associated with an influenza B/Victoria virus. The third death occurred during Week 21 (the week ending May 25, 2024) and was associated with an influenza B virus with no lineage determined.

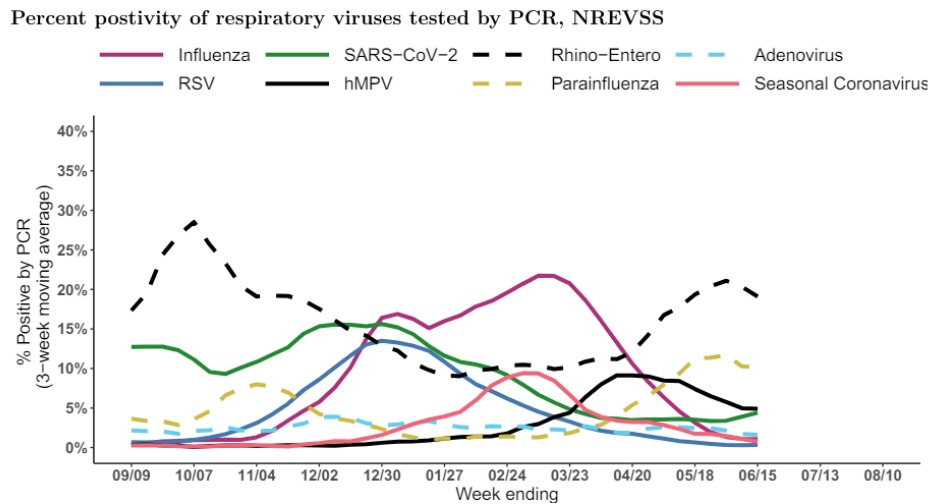

Statewide and Regional Influenza Activity

Influenza-like illness levels were below baseline statewide and below baseline in the southeastern region of the state.

Wisconsin Department of Health Services Respiratory Virus Surveillance Report, June 15, 2024

Respiratory Virus Laboratory Surveillance

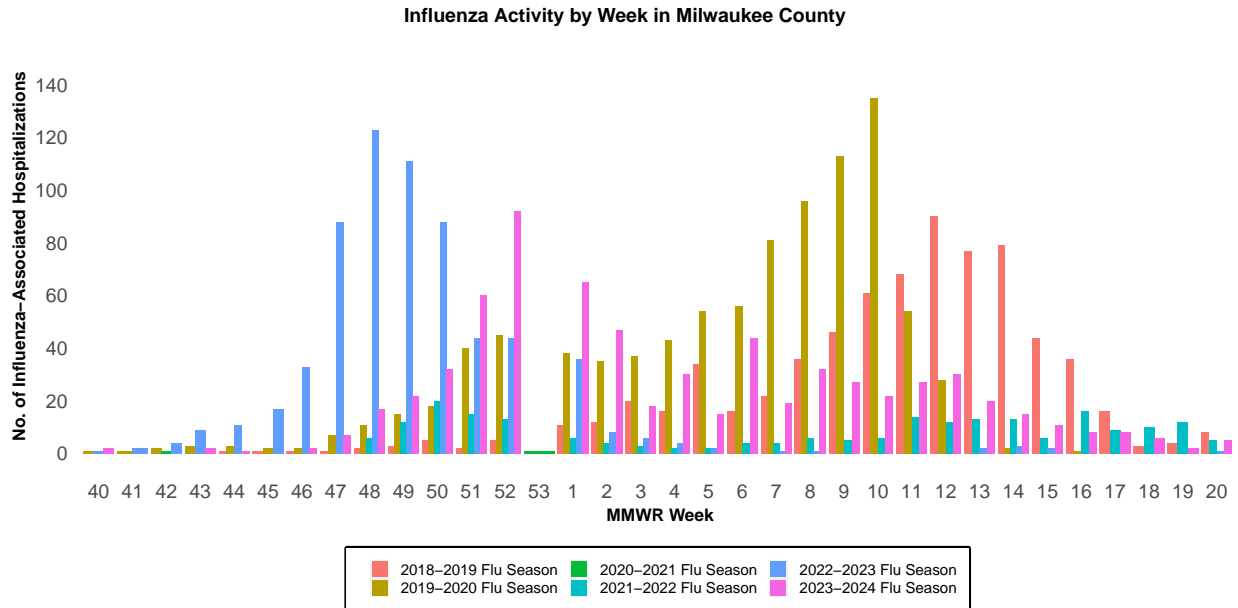

RSV = respiratory syncytial virus, hMPV = human metapneumovirus

Wisconsin Department of Health Services Respiratory Virus Surveillance Report, June 15, 2024

Milwaukee County Influenza Activity

From October 1, 2023 through June 15, 2024 there have been 690 reported influenza-associated hospitalizations in Milwaukee County.

Milwaukee County Influenza-Associated Hospitalizations

*Flu activity was unusually low in the 2020-2021 flu season, despite high levels of testing. COVID-19 mitigation measures such as wearing face masks, social distancing, staying home, and school closures, in addition to flu vaccination, likely contributed to the low flu activity during this season.

Milwaukee County Influenza-Associated Hospitalizations by Age Group MMWR Week 40, 2023 through Week 24, 2023

Influenza Testing Data

Public Health Laboratory Influenza Testing Data To-Date (Since Week 40)

Lab	Number Tested to date	Number Positive to date	Most Recent Week Percent Positive	Predominant A Subtype and Strain	Predominant B Strain	Predominant Type (A or B)
CDC	3,436,067	347,958	416/29,139 (1.4%)	H3N2	Victoria	A
WSLH	-	-	47/4,615 (1%)	Unknown	Unknown	A
MHDL	320	77	0/6 (0%)	N/A	N/A	B

National Influenza Testing Data, CDC FluView

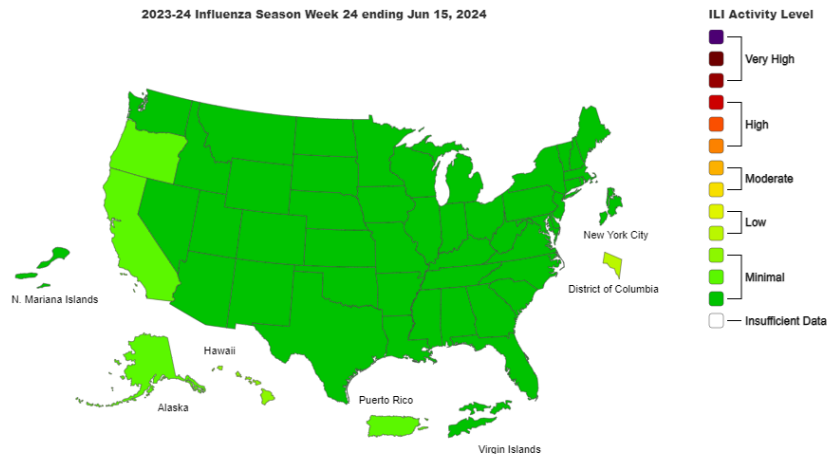

Influenza Positive Tests Reported to CDC by Public Health Laboratories, National Summary, 2023-24 Season, week ending Jun 15, 2024

Global Influenza Activity

Sentinel specimens testing positive for influenza, by virus type and subtype

<https://www.who.int/teams/global-influenza-programme/surveillance-and-monitoring/influenza-updates>, accessed 06/23/2024

- In the Northern hemisphere, elevated influenza activity continued to be reported in countries in Central America and the Caribbean and in South Asia, primarily due to influenza A(H3N2) viruses. In most temperate countries, influenza activity remained low at interepidemic levels. In the Southern hemisphere, countries in South America, South Africa, and Oceania reported elevated activity. In South America activity was primarily due to A(H3N2) viruses, in South Africa A(H1N1)pdm09 viruses predominated, and in Oceania A(H1N1)pdm09 and A(H3N2) viruses circulated.
- SARS-CoV-2 activity, reported from sentinel surveillance in 65 countries, was elevated and increasing in some countries in Central American and the Caribbean, South West Europe, Northern Europe, and South East Asia.

Influenza Vaccination Uptake by City of Milwaukee Residents, 2023-2024 Season

Overview

- City of Milwaukee residents who have received at least one dose of flu vaccinations as of June 23, 2024:

SARS-CoV-2 Wastewater Surveillance

COVID-19 Trends in Milwaukee Sewersheds

Category: Compared to the last 6 months of data, the average of the last three most recent SARS-CoV-2 measurements are in the 52 percentile for Jones Island Sewershed and are in the 34 percentile for South Shore Sewershed. These measurements are *moderate* for Jones Island and *moderate* for South Shore.

Trajectory: Wastewater concentrations of SARS-CoV-2 *significantly increased* in the Jones Island or South Shore sewersheds.
