## Respiratory Illnesses In the News

DHS launches new Pertussis dashboard: <https://www.dhs.wisconsin.gov/immunization/pertussis.htm>

### Overview

#### County

- There were 33 influenza-associated hospitalizations reported in Milwaukee County during the week ending on January 18, 2025. From September 29, 2024 through January 18, 2025, there have been 134 reported influenza-associated hospitalizations in Milwaukee County (90 City of Milwaukee residents).

#### State

- Statewide influenza-like illness activity is very high.
- Influenza activity is very high and increasing based on emergency department, laboratory testing, and wastewater data.
- RSV activity is high and increasing particularly in children under 5.

#### National

**Disclaimer: National influenza data is currently unavailable for this reporting period. Updates will be provided as soon as the data becomes available.**

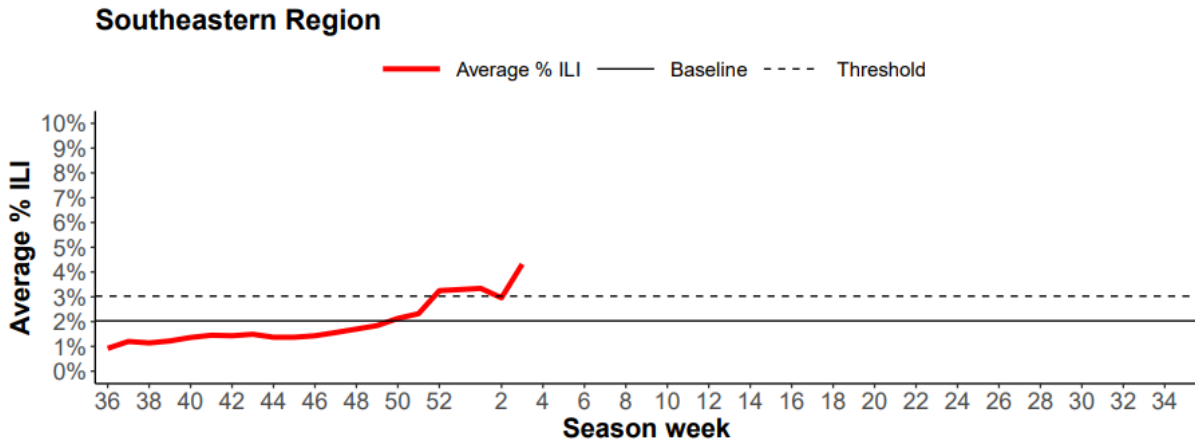

- Seasonal influenza remains elevated across most of the country. This week 10 jurisdictions experienced moderate influenza activity and 35 jurisdictions experienced high or very high activity.
- 11 influenza-associated pediatric deaths occurred during this week.
- Influenza A(H1N1)pdm09 and A(H3N2) were the predominant viruses this week.

#### CDC Pediatric Data (Since Week 40)

2024-25 To Date: Total Deaths	2023-24 To Date: Total Deaths	Pediatric Deaths This Week	Notes on Deaths
27	206	11	Eleven influenza-associated pediatric deaths occurring during the 2024-2025 season were reported to CDC during Week 2. The deaths occurred during weeks 51 and 52 of 2024 and during weeks 1 and 2 of 2025 (the weeks ending December 21 and December 28 of 2024 and January 4 and January 11 of 2025). All 11 deaths were associated with influenza A viruses. Six of the influenza A viruses had subtyping performed; three were A(H1N1) viruses, and three were A(H3N2) viruses. A total of 27 influenza-associated pediatric deaths occurring during the 2024-2025 season have been reported to CDC..

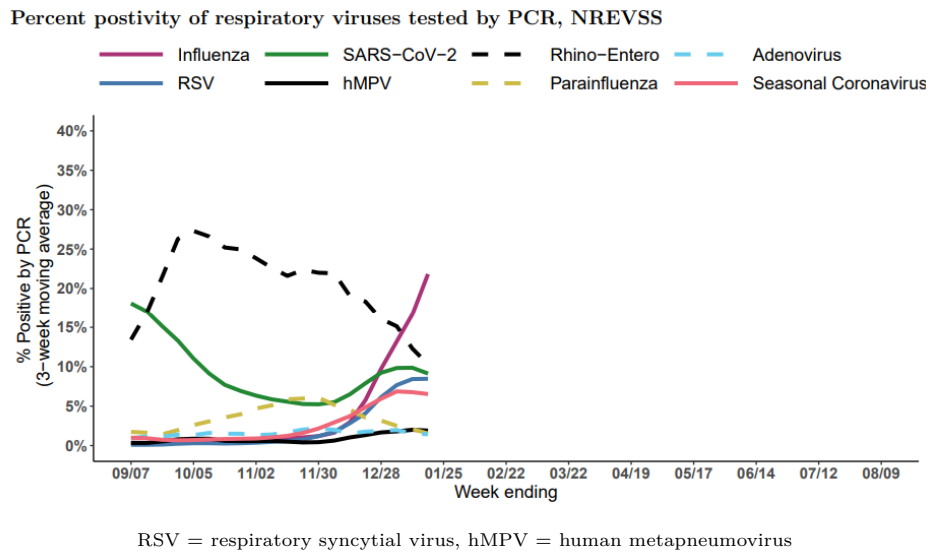

## Statewide and Regional Influenza Activity

Influenza-like illness levels were above baseline statewide and above baseline in the southeastern region of the state.

Wisconsin Department of Health Services Respiratory Virus Surveillance Report, January 18, 2025

## Respiratory Virus Laboratory Surveillance

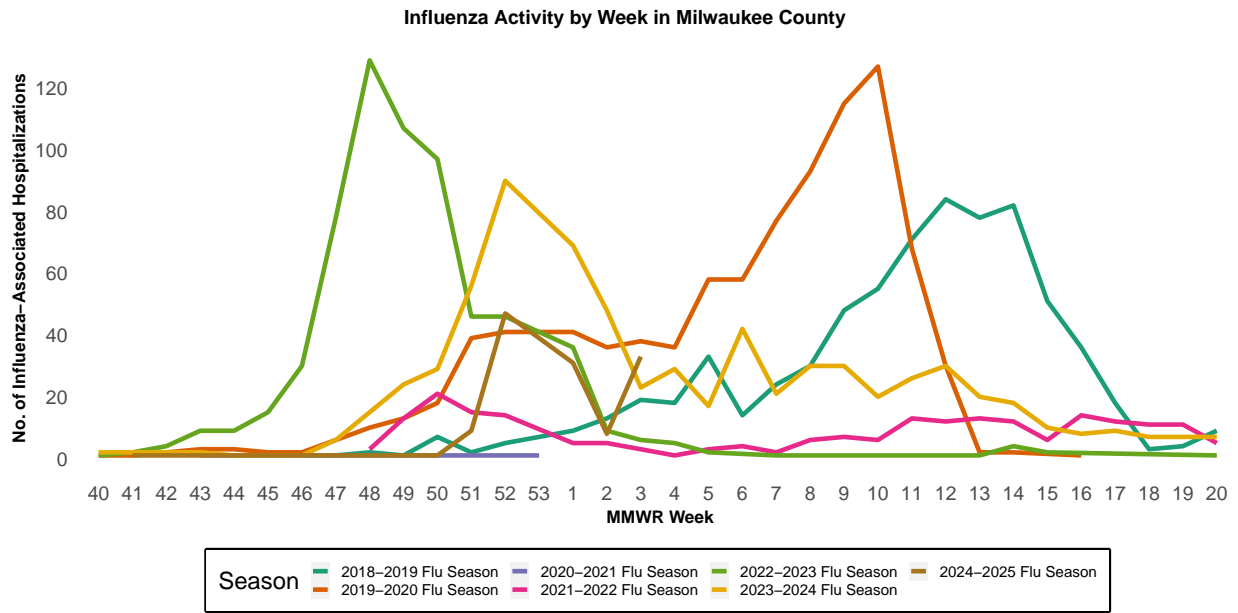

Wisconsin Department of Health Services Respiratory Virus Surveillance Report, January 18, 2025

## Milwaukee County Influenza Activity

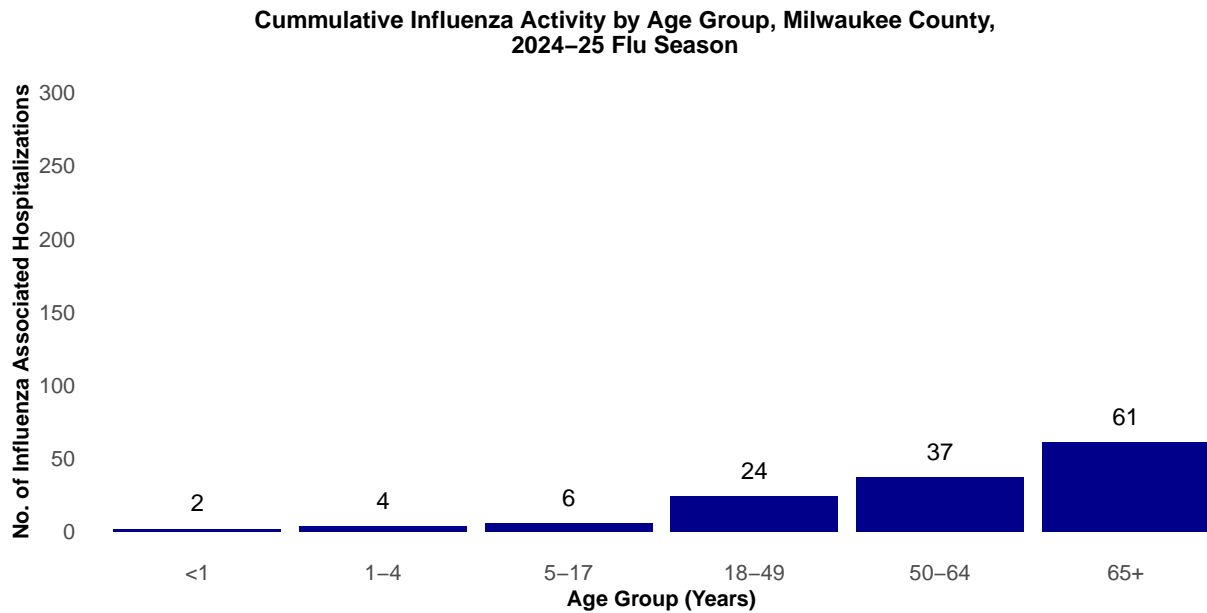

From September 29, 2024 through January 18, 2025 there have been 134 reported influenza-associated hospitalizations in Milwaukee County.

### Milwaukee County Influenza-Associated Hospitalizations

\*Flu activity was unusually low in the 2020-2021 flu season, despite high levels of testing. COVID-19 mitigation measures such as wearing face masks, social distancing, staying home, and school closures, in addition to flu vaccination, likely contributed to the low flu activity during this season.

### Milwaukee County Influenza-Associated Hospitalizations by Age Group MMWR Week 40, 2024 through Week 3, 2024

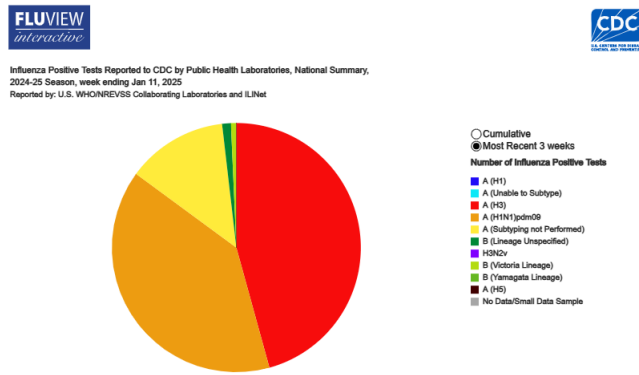

## Influenza Testing Data

### Public Health Laboratory Influenza Testing Data To-Date (Since Week 40)

Lab	Number Tested to date	Number Positive to date	Most Recent Week Percent Positive	Predominant A Subtype and Strain	Predominant B Strain	Predominant Type (A or B)
CDC	1,389,448	112,302	21,655/115,267 (18.8%)	H3N2	Victoria	A
WSLH	-	-	6,020/20,175 (29.8%)	Unknown	Unknown	A
MHDL	25	12	12/25 (48%)	N/A	N/A	A

## Respiratory Illness Emergency Department Visits in Milwaukee County

## Respiratory Illness Immunization Rates of Milwaukee County Residents, 2024-2025 Season

The Wisconsin Department of Health Services (DHS) Immunization Program has dashboards for statewide and county specific immunization rates for influenza vaccinations, COVID-19 vaccinations, and both infant and adult RSV vaccinations. Each immunization dashboard contains demographic data for people receiving vaccines.

To access these dashboards:

- COVID-19: <https://www.dhs.wisconsin.gov/immunization/covid-19-vaccine-data.htm>
- Influenza: <https://www.dhs.wisconsin.gov/immunization/influenza.htm>
- RSV: <https://www.dhs.wisconsin.gov/immunization/rsv-vaccine-data.htm>

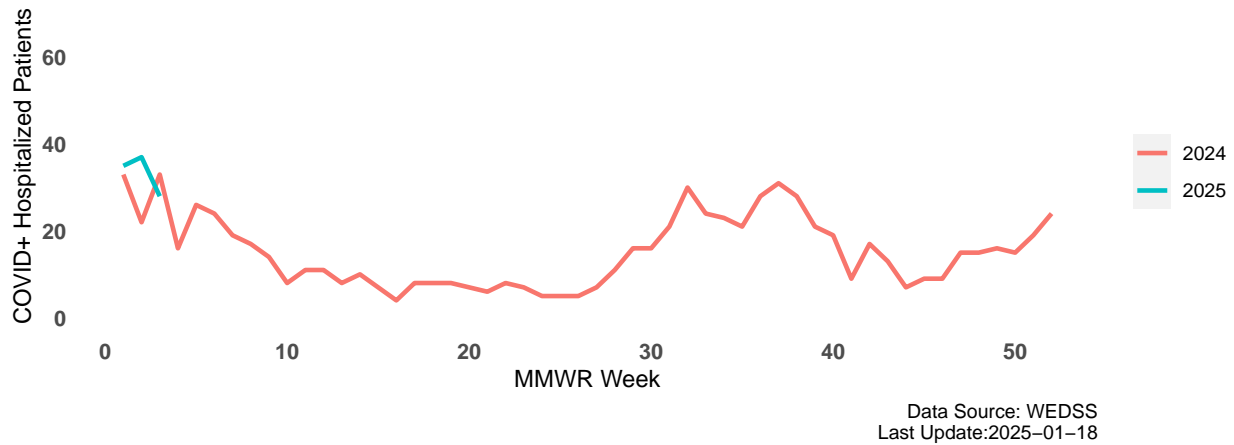

COVID-19 and RSV dashboards are updated weekly year-round and the influenza dashboard is updated weekly during the flu season.

**Influenza Vaccine Composition 2022-2023 Influenza Season** All standard-dose flu shots will be a trivalent formulation. The trivalent vaccines for use in the 2024-2025 influenza season contain the following:

- an A/Victoria/4897/2022 (H1N1)pdm09-like virus;
- an A/Thailand/8/2022 (H3N2)-like virus; and
- a B/Austria/1359417/2021 (B/Victoria lineage)-like virus

## COVID-19 Activity

## Wastewater Disease Surveillance - Respiratory Illnesses

**Data disclaimer: wastewater data for Flu A in previous respiratory reports experienced a calculation issue. This calculation has been corrected as of 1/24/2025. Please refer to Flu A data from this issue of the respiratory illness report or our dashboard.**

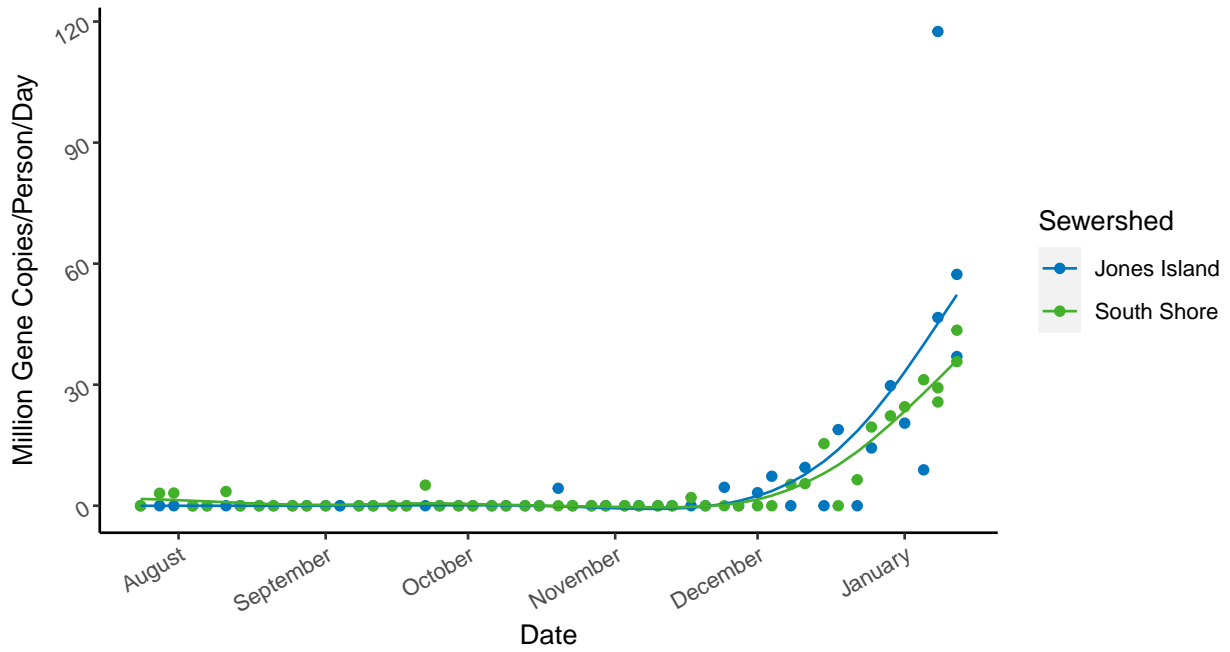

Wastewater disease surveillance is a powerful tool that detects illness before people start to show symptoms. MHD Laboratory does routine disease surveillance from wastewater samples at Milwaukee Metropolitan Sewerage Districts collection points, Jones Island and South Shore. Samples are taken twice weekly at each site. Wastewater disease surveillance can detect a wide variety of illnesses. At MHD, we test for COVID-19, influenza A, influenza B, and RSV respiratory pathogens.

When interpreting wastewater surveillance data, the trend is the most important indicator of disease level in the population. Each of the plots below include a spline that represents the trend of illnesses.

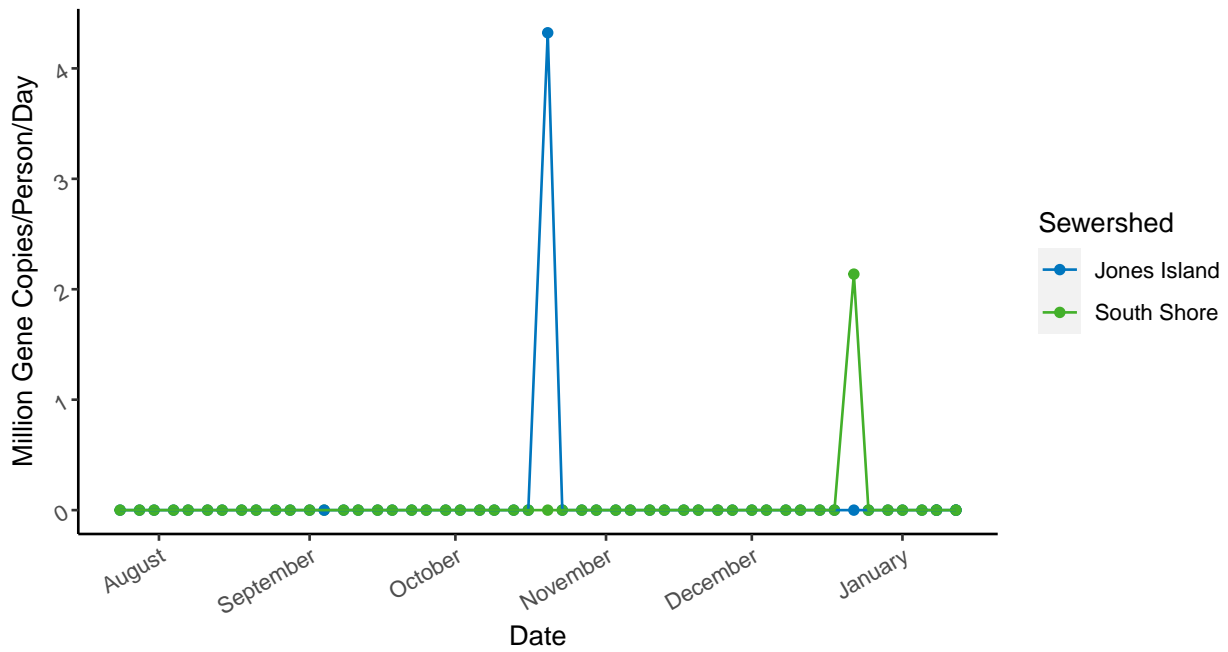

### COVID-19 Trends in Milwaukee Sewershed

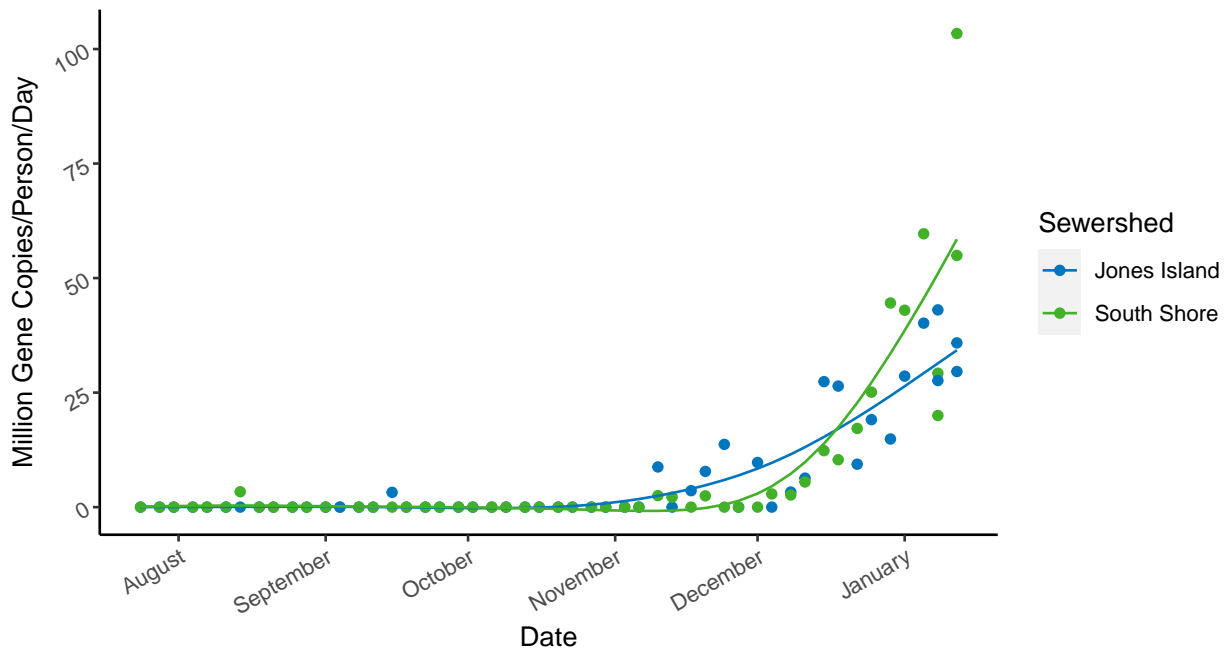

### Flu A Trends in Milwaukee Sewershed

### Flu B Trends in Milwaukee Sewershed

### RSV Trends in Milwaukee Sewershed

To see more interactive wastewater surveillance data, visit the MHD respiratory illness dashboard at <https://milwaukee.gov/wastewater>.
