Respiratory Illnesses In the News

In Wisconsin, there has been a significant increase in pertussis recently. DHS will continue to post updates here: <https://www.dhs.wisconsin.gov/outbreaks/index.htm>.

Overview

County

- There were 0 influenza-associated hospitalizations reported in Milwaukee County during the week ending on November 2, 2024. From September 29, 2024 through November 2, 2024, there have been 3 reported influenza-associated hospitalizations in Milwaukee County (0 City of Milwaukee residents).

State

- COVID-19 continues to circulate at low levels, and activity is stable from previous week
- Influenza and RSV activity remain low, but influenza activity is increasing.
- Now is the time to get the influenza, COVID-19, and RSV vaccines for protection ahead of the holiday season.

National

- Influenza activity is increasing slightly among children, but remains low nationally. This week no jurisdiction experienced moderate influenza activity and one jurisdictions experienced high or very high activity.
- 2 influenza-associated pediatric deaths occurred during this week.
- Influenza A(H1N1)pdm09 and A(H3N2) were all co-circulating this week.

CDC Pediatric Data (Since Week 40)

2024-25 To Date: Total Deaths	2023-24 To Date: Total Deaths	Pediatric Deaths This Week	Notes on Deaths
2	204	2	Two influenza-associated pediatric deaths were reported to CDC during Week 44. One death occurred during Week 41 (the week ending October 12, 2024) and was associated with an influenza A virus for which no subtyping was performed. This is the first influenza-associated pediatric death occurring during the 2024-2025 season that has been reported to CDC. One death occurring during the 2023-2024 season was also reported, which brings the total number of pediatric deaths for last season to 204. This death was associated with an influenza A(H1N1) virus and occurred during Week 8 of 2024 (the week ending February 24, 2024)

Statewide and Regional Influenza Activity

Influenza-like illness levels were below baseline statewide and below baseline in the southeastern region of the state.

Wisconsin Department of Health Services Respiratory Virus Surveillance Report, November 2, 2024

Respiratory Virus Laboratory Surveillance

RSV = respiratory syncytial virus, hMPV = human metapneumovirus

Wisconsin Department of Health Services Respiratory Virus Surveillance Report, November 2, 2024

Milwaukee County Influenza Activity

From September 29, 2024 through November 2, 2024 there have been 3 reported influenza-associated hospitalizations in Milwaukee County.

Milwaukee County Influenza-Associated Hospitalizations

*Flu activity was unusually low in the 2020-2021 flu season, despite high levels of testing. COVID-19 mitigation measures such as wearing face masks, social distancing, staying home, and school closures, in addition to flu vaccination, likely contributed to the low flu activity during this season.

Milwaukee County Influenza-Associated Hospitalizations by Age Group MMWR Week 40, 2024 through Week 44, 2024

Influenza Testing Data

Public Health Laboratory Influenza Testing Data To-Date (Since Week 40)

Lab	Number Tested to date	Number Positive to date	Most Recent Week Percent Positive	Predominant A Subtype and Strain	Predominant B Strain	Predominant Type (A or B)
CDC	324,672	2,518	739/57,221 (1.3%)	H1N1(pdm09)	N/A	A
WSLH	-	-	79/8,268 (1%)	Unknown	Unknown	A
MHDL	29	2	2/29 (0.07%)	N/A	N/A	A

Respiratory Illness Emergency Department Visits in Milwaukee County

Respiratory Illness Immunization Rates of Milwaukee County Residents, 2024-2025 Season

The Wisconsin Department of Health Services (DHS) Immunization Program has dashboards for statewide and county specific immunization rates for influenza vaccinations, COVID-19 vaccinations, and both infant and adult RSV vaccinations. Each immunization dashboard contains demographic data for people receiving vaccines.

To access these dashboards:

- COVID-19: <https://www.dhs.wisconsin.gov/immunization/covid-19-vaccine-data.htm>
- Influenza: <https://www.dhs.wisconsin.gov/immunization/influenza.htm>
- RSV: <https://www.dhs.wisconsin.gov/immunization/rsv-vaccine-data.htm>

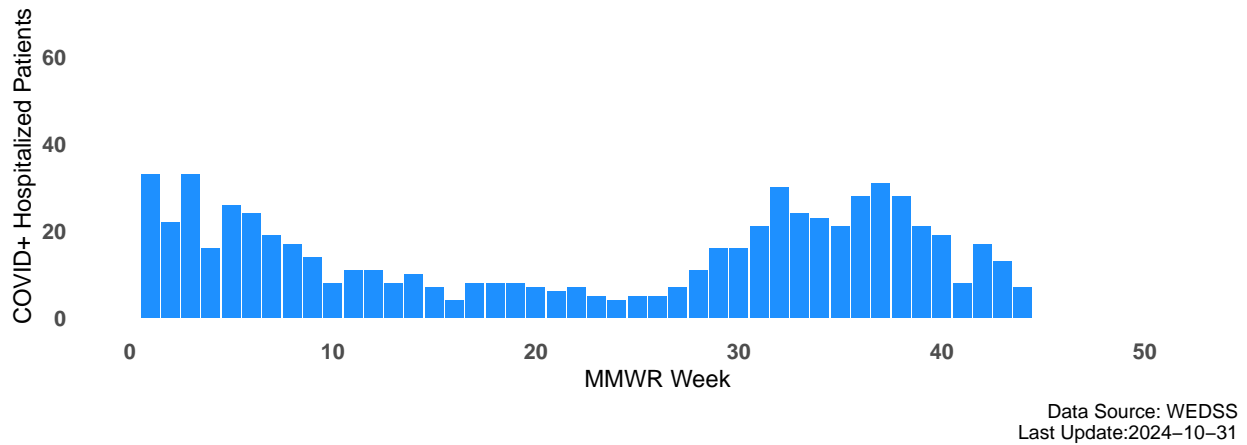

COVID-19 and RSV dashboards are updated weekly year-round and the influenza dashboard is updated weekly during the flu season.

Influenza Vaccine Composition 2022-2023 Influenza Season All standard-dose flu shots will be a trivalent formulation. The trivalent vaccines for use in the 2024-2025 influenza season contain the following:

- an A/Victoria/4897/2022 (H1N1)pdm09-like virus;
- an A/Thailand/8/2022 (H3N2)-like virus; and
- a B/Austria/1359417/2021 (B/Victoria lineage)-like virus

COVID-19 Activity

Hospitalized Patients that are COVID-19 Positive Timeline, Milwaukee County

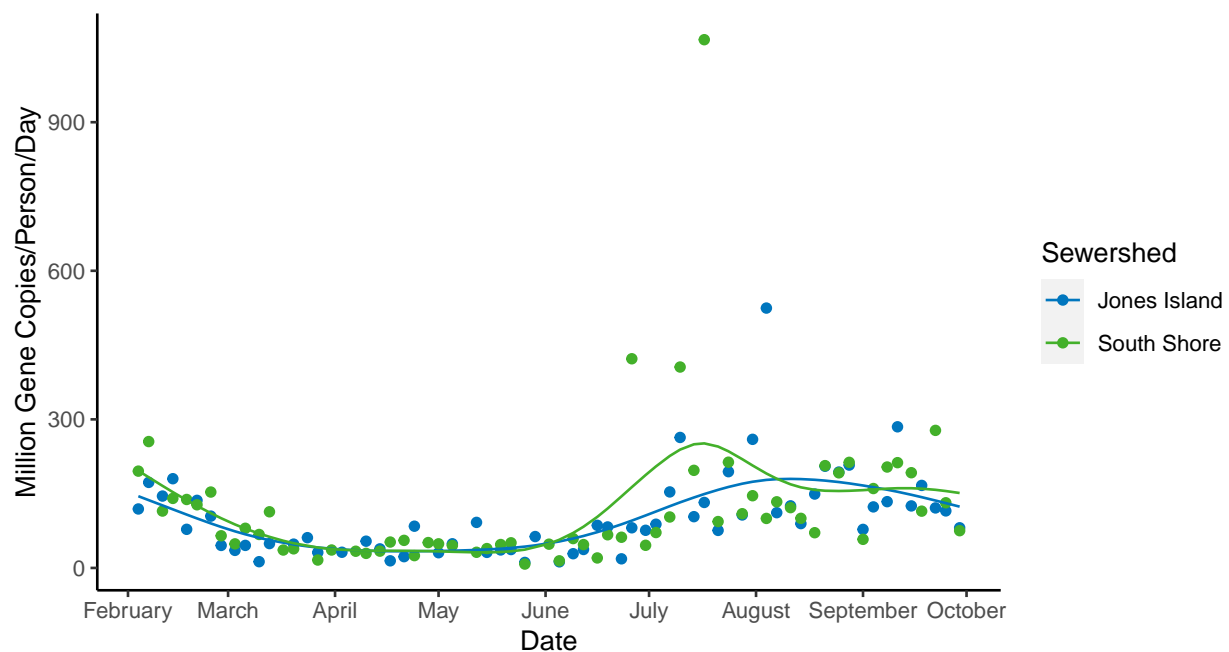

Wastewater Disease Surveillance - Respiratory Illnesses

Wastewater disease surveillance is a powerful tool that detects illness before people start to show symptoms. MHD Laboratory does routine disease surveillance from wastewater samples at Milwaukee Metropolitan Sewerage Districts collection points, Jones Island and South Shore. Samples are taken twice weekly at each site. Wastewater disease surveillance can detect a wide variety of illnesses. At MHD, we test for COVID-19, influenza A, influenza B, and RSV respiratory pathogens.

When interpreting wastewater surveillance data, the trend is the most important indicator of disease level in the population. Each of the plots below include a spline that represents the trend of illnesses.

COVID-19 Trends in Milwaukee Sewershed

At this time, there have been no influenza A, influenza B, or RSV detections in either of Milwaukee's two sewersheds. Once there are detection for influenza A, influenza B, or RSV, plots will be included to reflect detection level as is done with the COVID-19 Wastewater plot above.
