Notes:

<sup>1</sup> The numbers in this table represent the number of encounters per person that was involved in the encounter. For example, if there were two field interviews in District 1 which involved two individuals each, the total for field interviews in District 1 would be four.

<sup>2</sup> "NULL" refers to encounters in which the data indicated "NULL" in the field for police district.

<sup>3</sup> "Missing" refers to encounters that were missing district data and missing longitude and latitude information in the TraCS data files.

<sup>4</sup> The percentages for the grand totals are the percentages for that type of encounter out of the total encounters. The percentages for the districts are the percentages for that district out of the total number of the type of encounter in the column.
